1 Hardware Installation

This chapter is mainly for installation introduction, there would be some difference between the scheme and real object. But the difference won't have any influence to products performance.

1.1 Panel

Table 1-1 WL-G535 Structure

WLINK Tech.	G535 series
Front	
Top	

NOTE

There are some difference on Antenna interface and indicator light for the device with extended Wi-Fi, GPS features.

Table 1-2 Router Interface

Port	Instruction	Remark
USIM	Plug type SIM Slot, support 1.8/3V/5V automatic detection.	
Main	5G-1~5G-5 antenna, SMA connector, 50Ω.	

Port	Instruction	Remark
GPS	GPS antenna, SMA connector, 50Ω.	Optional
Wi-Fi	2.4G Wi-Fi, 5G Wi-Fi. dual-band antennas, RP-SMA connector	
LAN0~LAN4	10/100/1000Base-TX, MDI/MDIX self-adaption.	
Reset	Reset button, (press on button at least 5 seconds)	
PWR	Power connector	7.5~32VDC
IO Interface	5xPins	
Terminal Block	1xRS232, 1xRS485, 1xDC Power	

1.2 LED Status

Table 1-3 Router LED indicator Status

silk-screen	status		Indication
Signal	Green	Solid Light	LED1: weak (CSQ0~10) LED2: good (CSQ11~19) LED3: strong (CSQ20~31)
PWR	Constant Light		System power operation.
WLAN	Constant light		WLAN enable, but no data communication.
	Blinking quickly		Data in transmitting
	Light off		WLAN disable
NET	Quick Blink (0.5s)		Offline
	Slow Blink (1.5s)		4G Online
	Solid Light		5G Online
LAN	Green	Constant light	Connected.
	Green	Blinking	Data in transmitting.
	Green	Light off	Disconnection.

1.3 Dimension

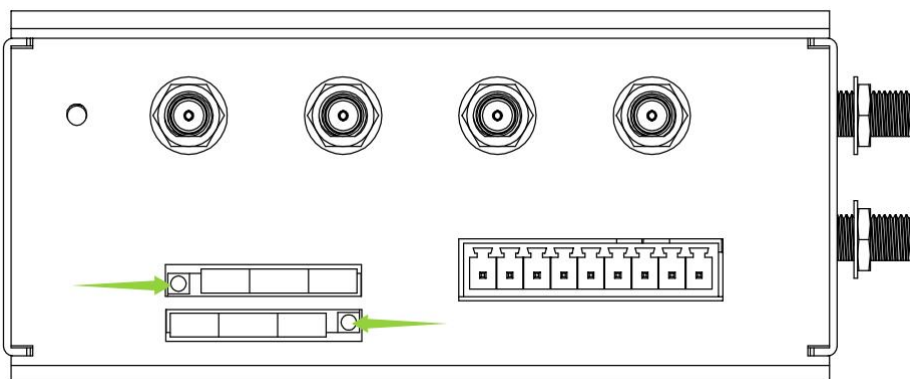

Figure 1-2 G535 Series Router Dimension

1.4 How to Install

1.4.1 SIM/UIM card install

Please press the SIM button and put SIM card into tray before configure the router.

Before connecting, please disconnect any power resource of router

1.4.2 Ethernet Cable Connection

Connect the router with a computer by an Ethernet cable for GUI configuration, or transit by a switch.

1.4.3 5G and Wi-Fi Antenna Plug

Connect the two magnetic 5G antennas to 5G-1 to 5G-5 interfaces, and the four paddle shape Wi-Fi antennas to Wi-Fi interfaces.

Wi-Fi antenna supports dual-band 2.4G and 5G bands.

1.4.4 Serial Port (Terminal block) Connection

The serial port supports both RS232/RS485 port. The serial port feature supports TCP/UDP client/server as optional, also supports Modbus protocol. You may check the feature in Serial App of Advanced Network UI. Below is RS232 connection sequence as reference.

Pin	Instruction	Remark
1	V+	Power V+, Anti reverse
2	V-	Power V-
3	485A	RS485 A
4	485B	RS485 B
	GND	GND for RS232 communication
5	TX	RS232 TX
6	RX	RS232 RX
7	DI	Digital Input, Dry Contact
8	DO	Short to GND

The serial port will be unavailable in WL-G535 standalone GPS model.

1.4.5 Power Supply

Voltage input range: +7.5~32VDC. (Extended models: 7.5~ 48VDC)

1.4.6 Review

After insert the SIM/UIM card and connect Ethernet cable and antenna, connect power supply adaptor or power cable.

Please connect the antenna before power on, otherwise the signal maybe poor because of impedance mismatching.

Notice:

- Step 1 Check the antenna connection.
- Step 2 Check SIM/UIM card, confirm SIM/UIM card is available.
- Step 3 Power on the industrial Router

---END

2 Router Configuration

WL-G930 Series routers support GUI and CLI configuration. This chapter introduce GUI configuration via Ethernet port, if need CLI configuration guide, please contact our technical support department by email: support@wlink-tech.com.

2.1 Local Configure

The router supports to be configured by local Ethernet port, you could specify a static IP or set as DHCP. The default IP address is 192.168.1.1, subnet mask is 255.255.255.0, please refer to following.

- Step 1 Click “start > control panel”, find “Network Connections” icon and double click it to enter, select “Local Area Connection” corresponding to the network card on this page. Refer to the figure below.

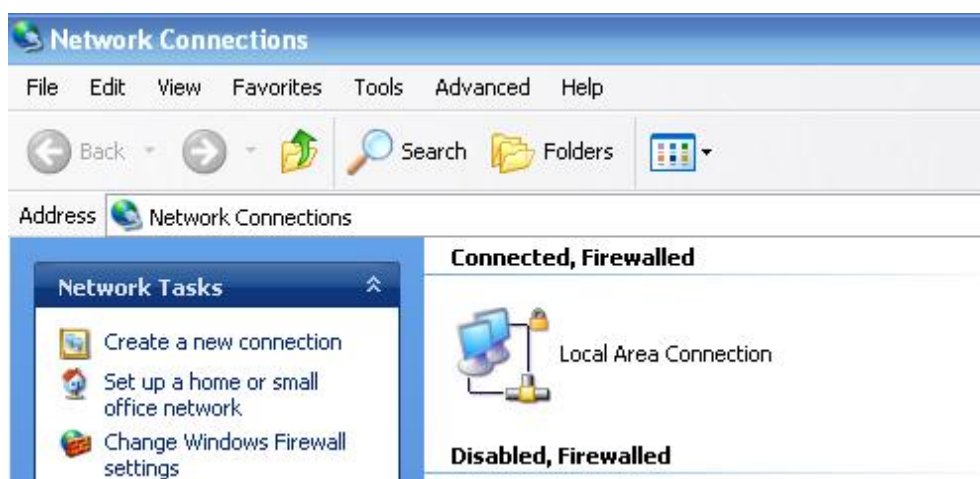

Figure 2-1 Network Connection

- Step 2 Obtain a IP address automatically or set up IP address,192.168.1.xxx(XXX can be any number between 2~254)

- Step 3 Run an Internet Explorer and visit “<http://192.168.1.1/>”, to enter identify page.

User should use the default user name and password when log in for the first time

Figure 2-2 User Identify Interface

----END

2.2 Status

Check routers information such as status, traffic Stats and device list after login router. Especially, suggest change the password according to the prompts because of security requirement.

You haven't changed the default password for this router. To change router password [click here](#).

The UI will display "already changed login password successfully" after router reboot.

Already changed login password successfully.

2.2.1 Overview

The overview GUI will be display router system information, Ethernet ports status, VPN connection status, LAN information, 5G connection information and WLAN information,

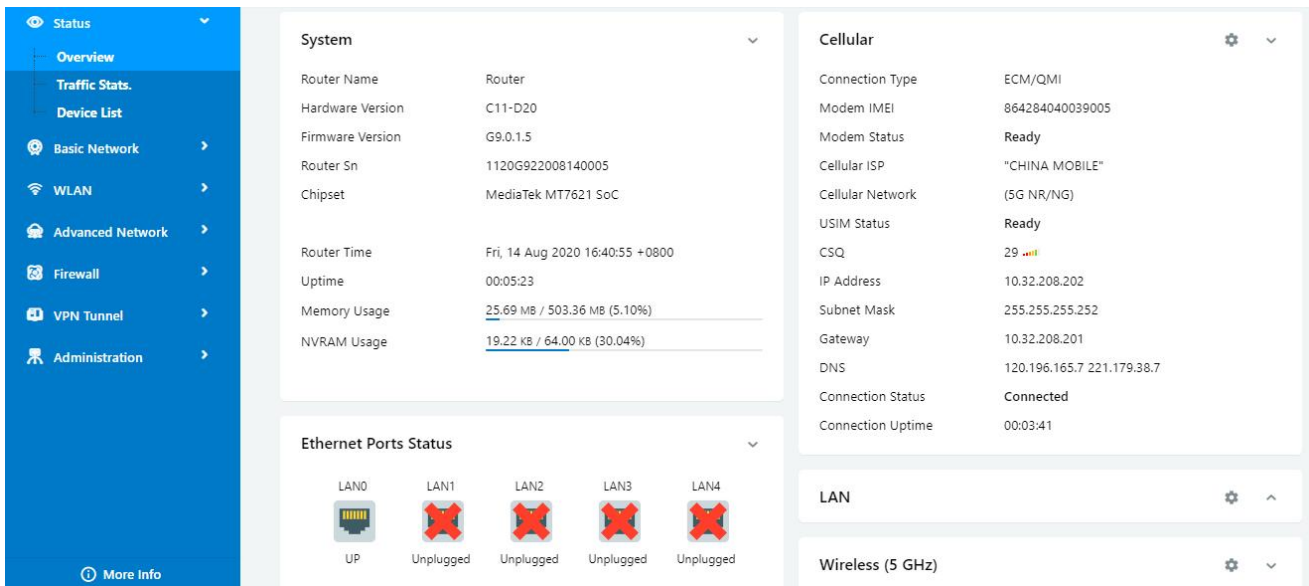

Figure 2-3 Router Status GUI

2.2.2 Traffic Stats.

Click Status->Traffic Stats. to enter the traffic stats.GUI.to check Cellular/WAN traffic in real-time.

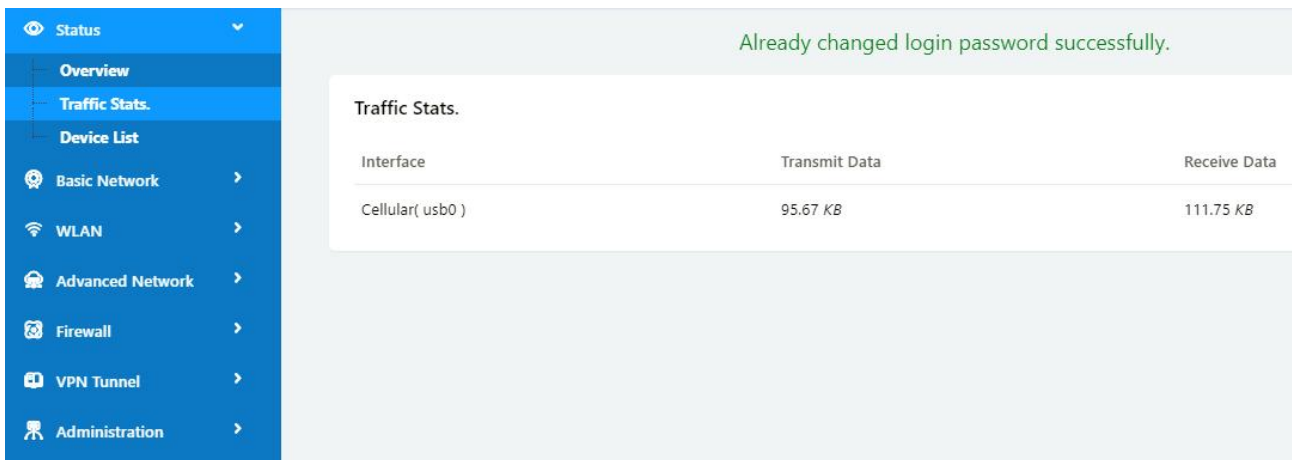

Figure 2-4 Traffic Stats. GUI

2.2.3 Device List

Click Status->Device List to enter the device list GUI.to check the connected devices information in the list.

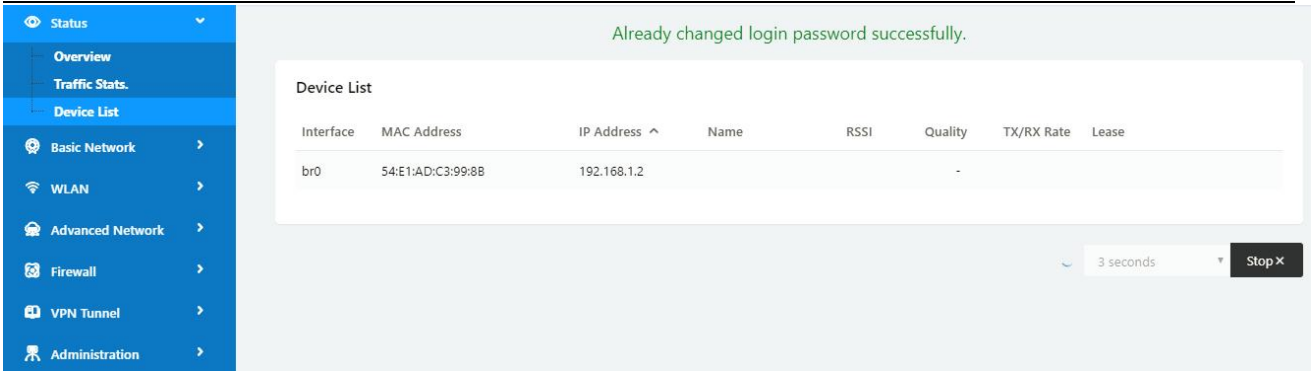

Figure 2-5 Device List GUI

2.3 Tool Column

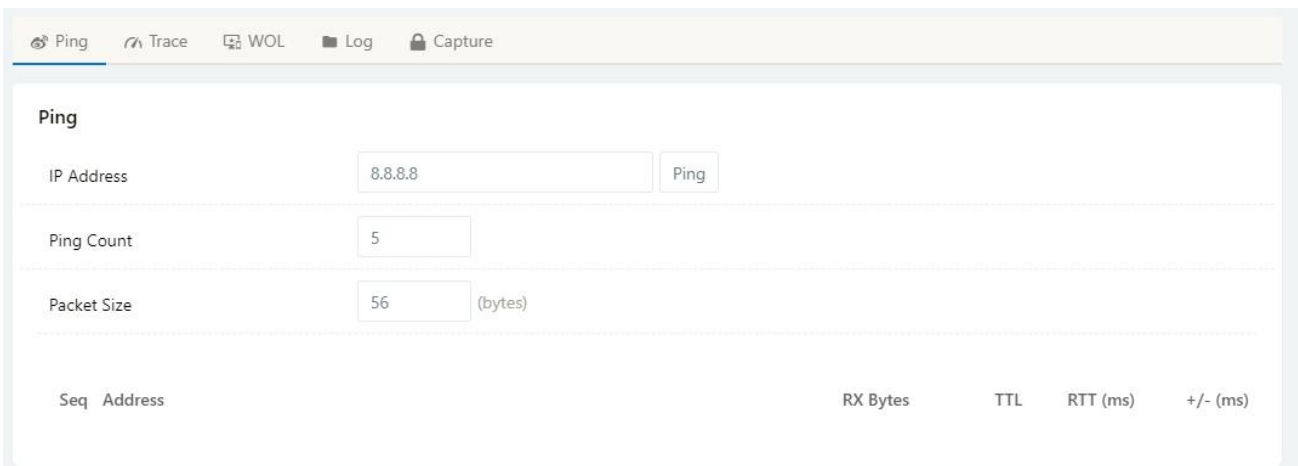

Figure 2-6 Tool Column GUI

2.3.2 Tools

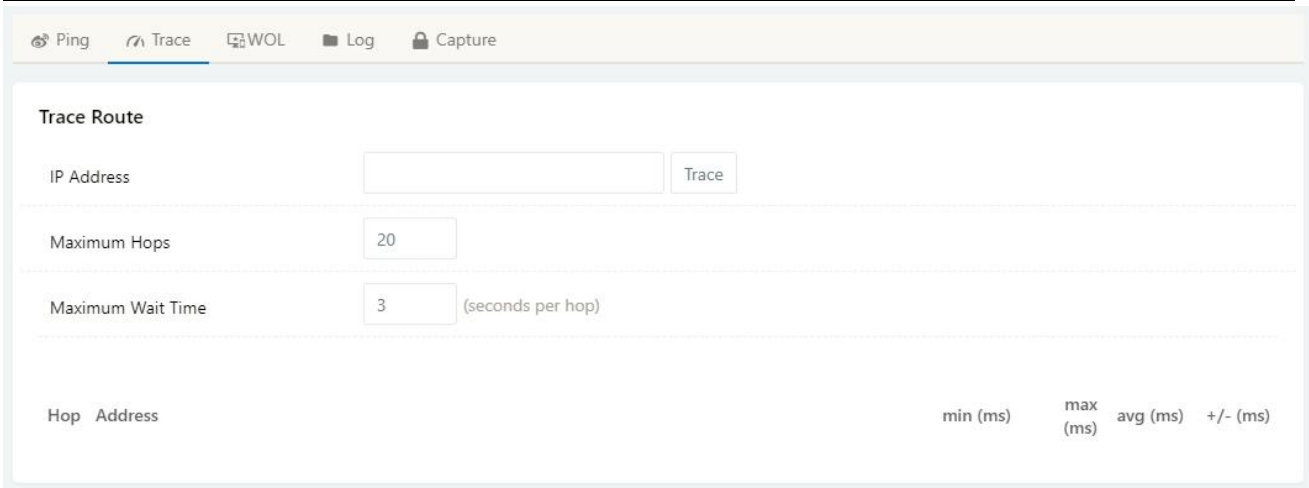

2.3.2.1 Ping

Click Tools->Ping to enter ping test GUI. Used to test the reachability of a host on an Internet IP network and to measure the round-trip time for messages sent from the originating host to a destination server.

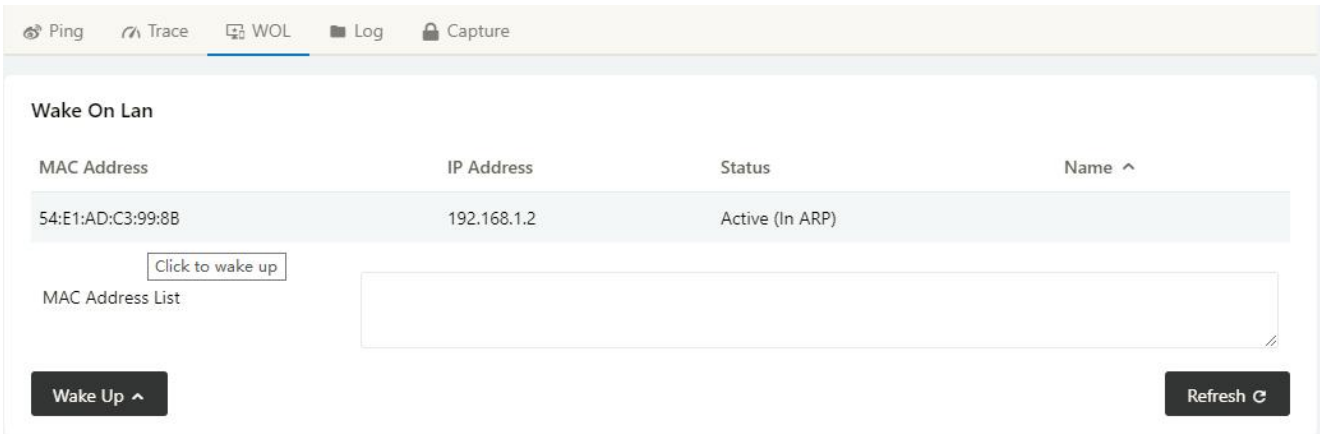

2.3.2.2 Trace

Click Tools->Trace to enter trace test GUI. diagnostic tool for displaying the route and measuring transit delays of packets across an Internet IP network.

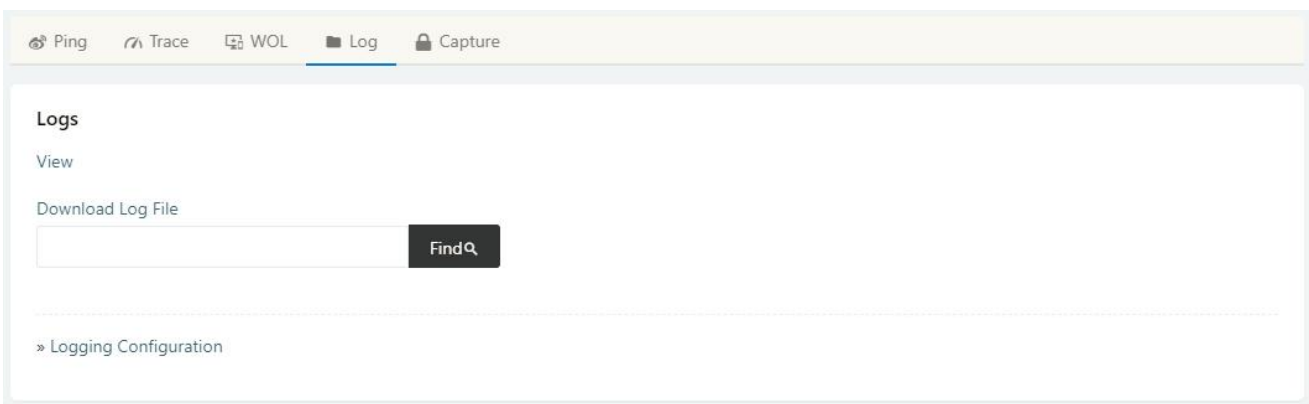

2.3.2.3 WOL

Click Tools-> WOL to enter WOL(Wake On Lan) GUI. Used to wake up those connected devices via WOL protocol. Click left mouse button to wake up the device.

2.3.2.4 Log

Click Tools-> Log to enter Log GUI. Use to check logs in GUI, download GUI and send logs to server.

2.3.2.5 Capture

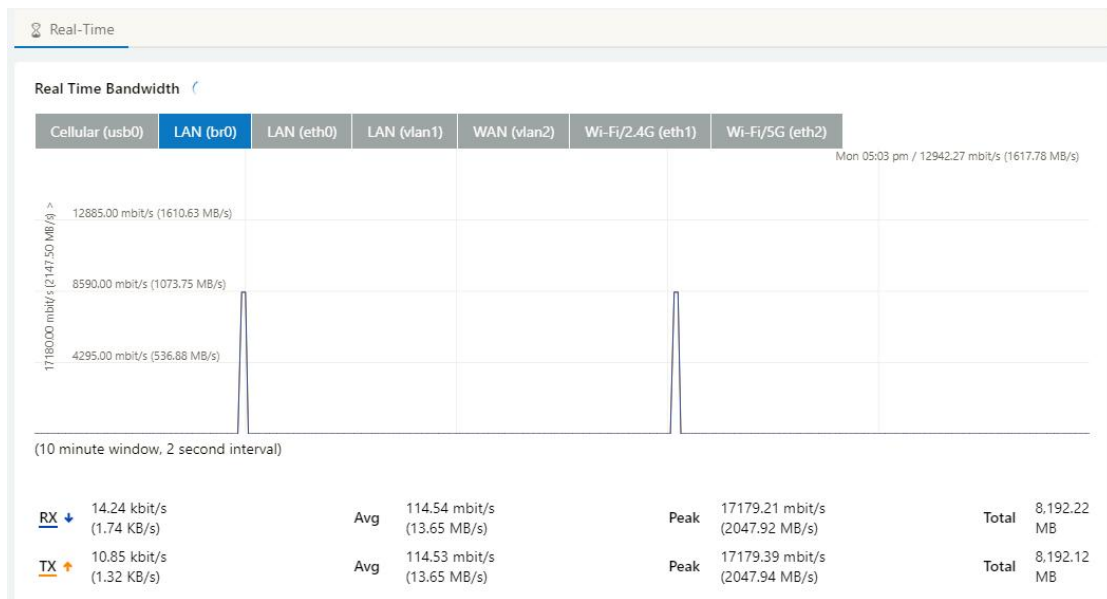

Click Tools-> Capture to enter capture data GUI. Use to capture LAN/WAN data packet to analyse what happen in

the router.

2.3.3 Bandwidth

Click Bandwidth to enter bandwidth graphic GUI. Used to check cellular/LAN/Wi-Fi real-time bandwidth.

2.3.4 System

Click system to choose software reboot, hardware reboot and logout GUI.

2.4 Basic Network

2.4.1 WAN Setting

Step 1 Basic Network>WAN to enter below interface.

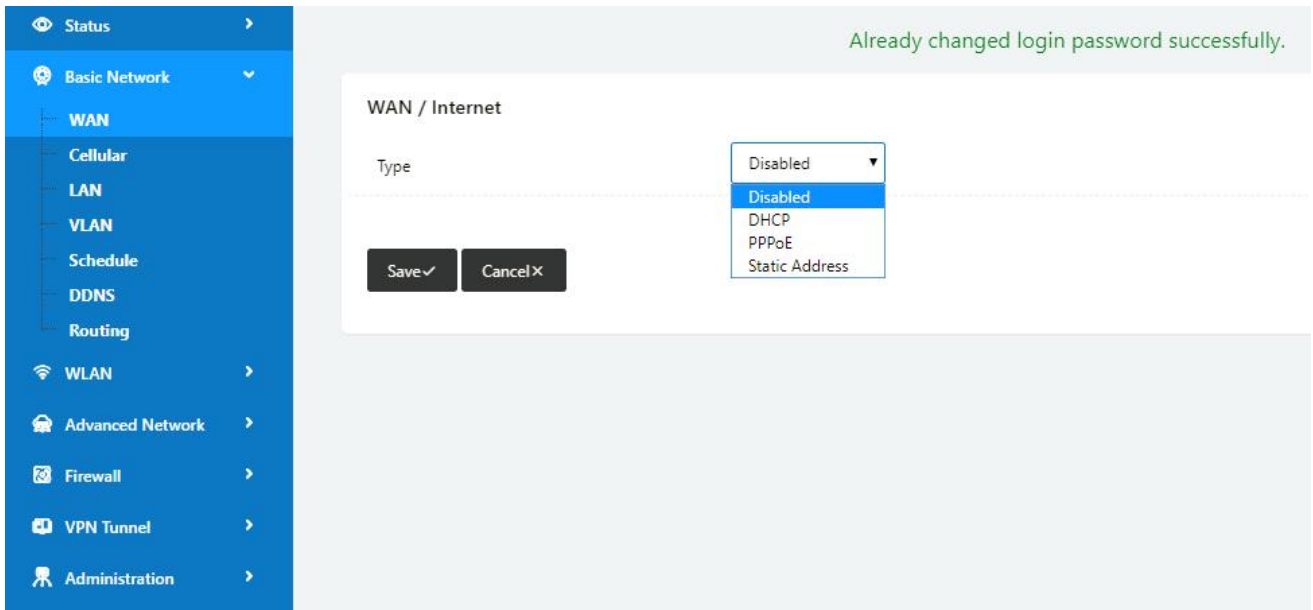

Table 2-1 WAN Setting Instruction

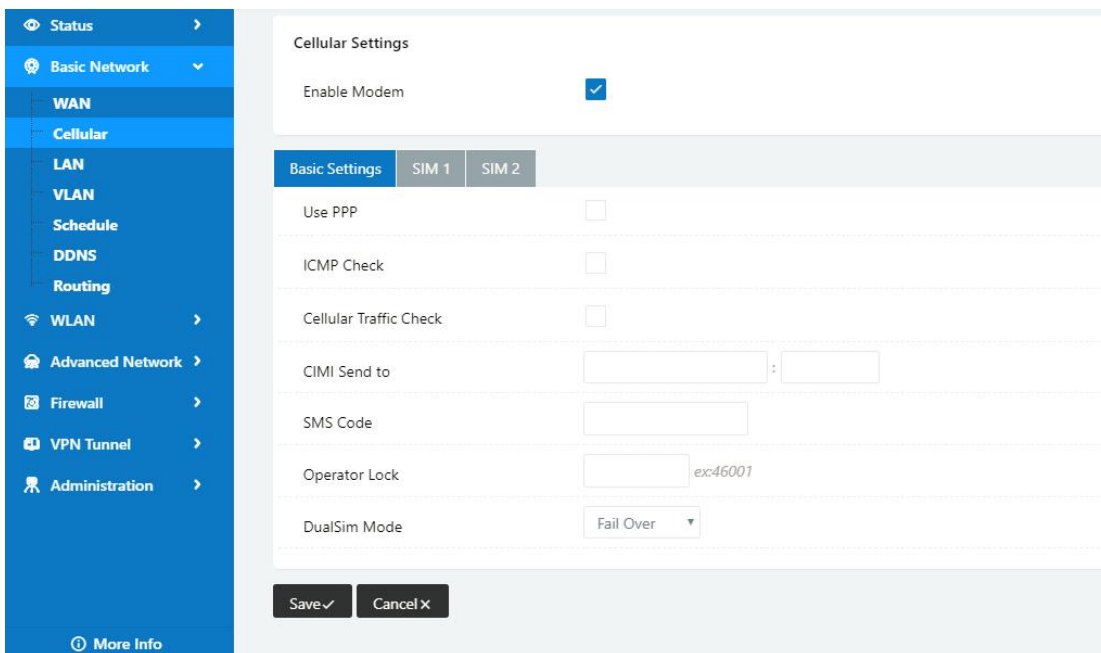

Parameter	Instruction	Default
Type	Support DHCP, PPPoE, Static IP address	

Step 2 After setting, please click “save” to finish, the device will reboot.

----End

2.4.2 Cellular Setting

Step 1 Basic Network-> Cellular, you can modify relevant parameter according to the application.

Basic Settings	SIM 1	SIM 2
SIM 1 Mode	Auto ▼	
SIM 1 PIN Code	<input type="text"/>	
SIM 1 APN	3GNET	
SIM 1 User	CARD	
SIM 1 Password	****	
SIM 1 Dial Number	*99#	
SIM 1 Auth Type	Auto ▼	
SIM 1 Local IP Address	<input type="text"/>	

Table 2-2 WAN Setting Instruction

Parameter	Instruction	Default
Enable Modem	Enable/Disable 5G mode.	
Use PPP	ECM dialup as default. PPP is suitable for 4G connection only.	
ICMP check	If enable ICMP check and setup a reachable IP address as destination IP, the router will reconnect/reboot once ICMP check failed.	
Cellular Traffic Check	The router will reconnect/reboot once there's no Rx/Tx data.	
MTU	MTU configurable. 0 as default for MTU 1500	
CIMI Send to	Send CIMI to a defined IP and port by TCP protocol.	
SMS Code	Remote control the router by SMS. Only the configured SMS code will work.	
Operator Lock	Lock a specified operator for the router by MCC/MNC code.	
Dual SIM Mode	<p>【Fail Over】 Two SIM cards mutual backup. Once SIM1 failed, it'll switch to SIM2 and work on SIM2, and vice versa.</p> <p>【SIM1 Only】 Only SIM1 works.</p> <p>【SIM2 Only】 Only SIM2 works.</p>	

Parameter	Instruction	Default
	【Backup】 SIM1 is the primary SIM. Once SIM1 failed, it'll switch to SIM2 and work on SIM2 for a specified period of time, then it switches back to SIM1.	
Mode	【Auto】 The router will automatically connect to 3G/4G/5G networks and give priority to 5G. 【5G NR】 Router will connect to 5G only. 【LTE】 Router will connect to 4G only. 【3G】 Router will connect to 3G only.	
Pin Code	Some SIM cards are locked with a Personal Identification Number (PIN) code in case they are lost or stolen.	
APN	APN is provided by local ISP, usually CDMA/EVDO networks do not need this parameter.	
User	SIM card user name is provided by ISP	
Password	SIM card password is provided by ISP	
Auth. Type	Auto/PAP/Chap/MS-Chap/MS-Chapv2 authentication optional.	
SIM Local IP Address	Fix SIM IP. The feature is available if carrier can provide this service.	

NOTE ICMP Check and Cellular Traffic Check are alternative.

【ICMP Check】

Enable ICMP, Router will automatically check whether the defined IP address is reachable per 60s. If the IP address is unreachable and ICMP check is timeout at the first time, it will check 2 times every 3 seconds. If the third time is still failed, the router will redial.

The ICMP Check IP is a public IP or company server IP address.

ICMP Check	<input checked="" type="checkbox"/>
Check IP	<input type="text" value="8.8.8.8"/>
Check IP (Optional)	<input type="text" value="4.4.4.4"/>
Interval	<input type="text" value="60"/> (seconds)
Retries	<input type="text" value="3"/> (Times)
Fail Action	<input type="text" value="Reboot System"/>

【Cellular Traffic Check】

【Check Mode】 there are Rx(Receive), Tx(Transmission) and Rx/Tx check modes.

【Rx】 Router will check the 3G/LTE cellular receiver traffic. If no receiver traffic within the defined check interval, the router will implement the specified action reconnect or reboot.

Cellular Traffic Check	<input checked="" type="checkbox"/>
Check Mode	<input type="text" value="Rx"/>
Check Interval	<input type="text" value="10"/> (minutes)Range: 1 ~ 1440
Fail Action	<input type="text" value="Cellular Reconnect"/>

Step 2 After Setting, please click “save” icon.

----End

2.4.3 LAN Setting

Step 1 Basic Network>LAN to enter below interface

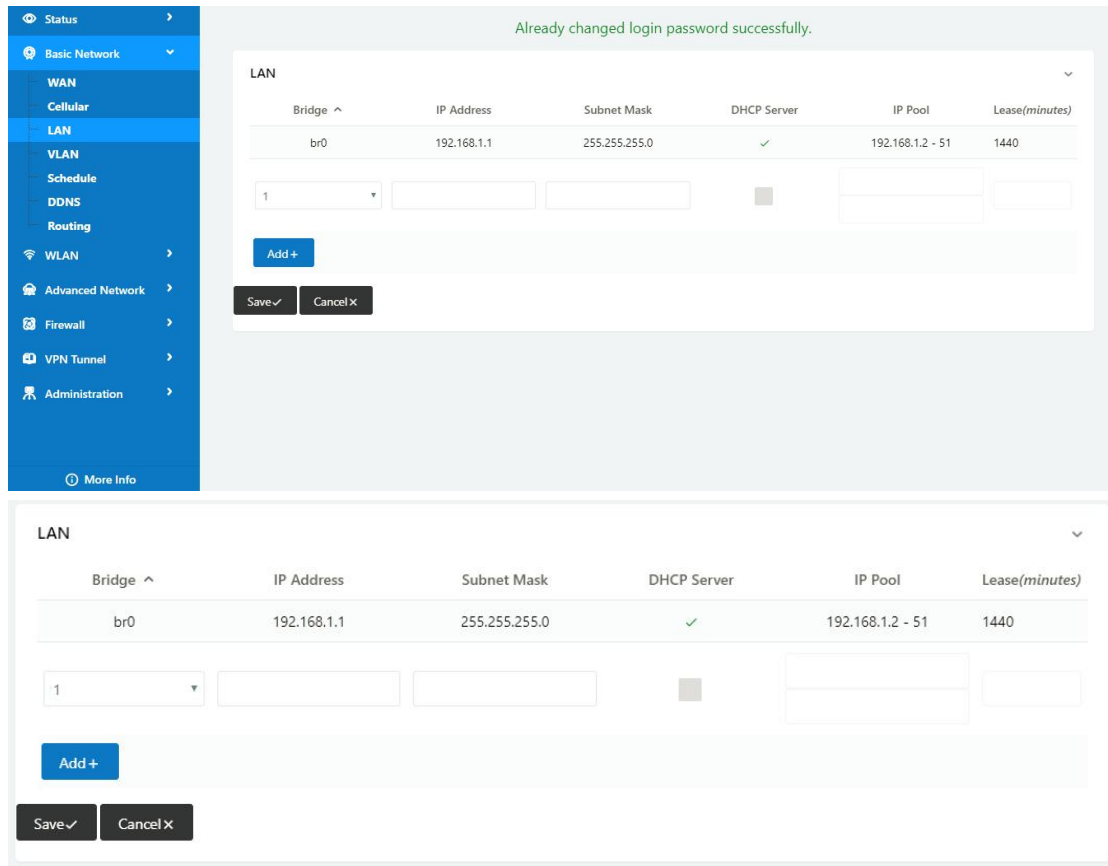

Table 2-3 LAN Setting Instruction

Parameter	Instruction	Default
Bridge	Supports 4 LAN IP address for br0 to br3 interface. If need to support VLAN, please go to VLAN GUI.	
Router IP Address	Router IP address, default IP is 192.168.1.1	
Subnet Mask	Router subnet mask, default mask is 255.255.255.0	
DHCP	Dynamic allocation IP service, after enable, it will show the IP address range and options of lease	
IP Pool	IP address range within LAN	
Lease	The valid time, unit as minute	
Add	Add LAN IP address, supports 4 LAN IP addresses.	

Step 2 After setting, please click “save” to finish, the device will reboot.

----End

2.4.4 VLAN

Step 1 Basic Network->VLAN to enter the VLAN setting page.

Table 2-4 LAN Setting Instruction

Parameter	Instruction	
VID	VLAN ID number. The VID range is from 1 to 15.	
LAN1~LAN4, WAN	Defined LAN ports as different Bridge.	
Tagged	Enable to make router can encapsulate and de-encapsulate the VLAN tag.	
Bridge	Route interface br0, br1, br2, br3 and WAN	

Step 2 Please Click “Save” to finish.

---End

2.4.5 Schedule

Step 1 Basic Network->Schedule to enter the Schedule setting page.

Parameters	Instruction	Default
modem	The router dial-up to network via modem	

wan	The router dial-up to network via WAN (DHCP, PPPOE, Static IP) port.	
ICMP Check	When the ICMP Check fails, the switching action between Link1 and Link2 will be triggered.	
Link1	The Primary link	
Link2	The Secondary link	
BACKUP	Link1 and Link2 mutual backup. Link1 is the primary link. Once Link1 is failed, it will switch to Link2 and work on Link2. Once Link1 recovers, it will switch back to Link1.	
FAILOVER	Link1 is the primary link, Link2 is the backup link. Once Link1 is failed, it will switch to Link2 and work on Link2.	

Link Name	Link Type	Description
modem	ECM/QMI	
wan	WAN(STATIC)	

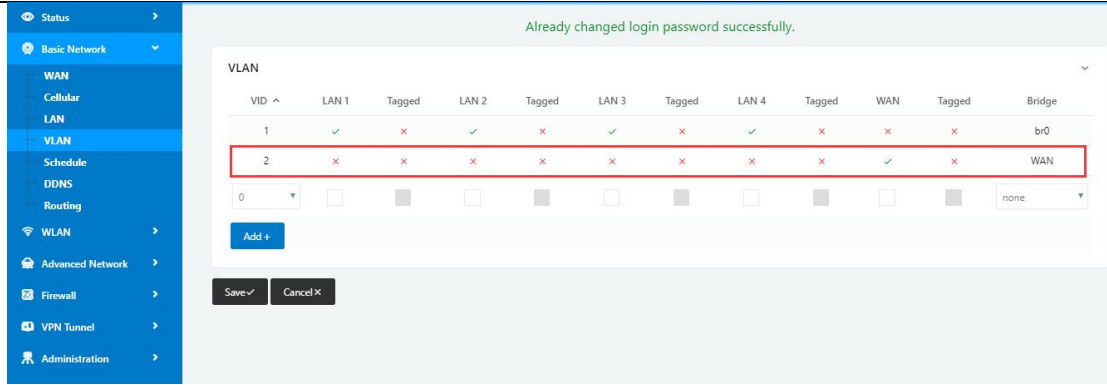

ICMP Check						
On	Link	Destination	Interval	Retries	Description	
<input checked="" type="checkbox"/>	wan	8.8.8.8	10	5		
<input checked="" type="checkbox"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	
<input type="button" value="Add +"/>						

Schedule					
On	Link 1	Link 2	Policy	Description	
<input checked="" type="checkbox"/>	wan	modem	FAILOVER	wan as primary and modem as secondary	
<input type="button" value="Add +"/>					

NOTE

The VLAN should be configured with WAN and 5G backup together. Please define WAN port as bridge WAN interface in the VLAN GUI as below.

Step 2 Please Click “Save” to finish.

---End

2.4.6 Dynamic DNS Setting

Step 1 Basic Network->DDNS to enter the DDNS setting page.

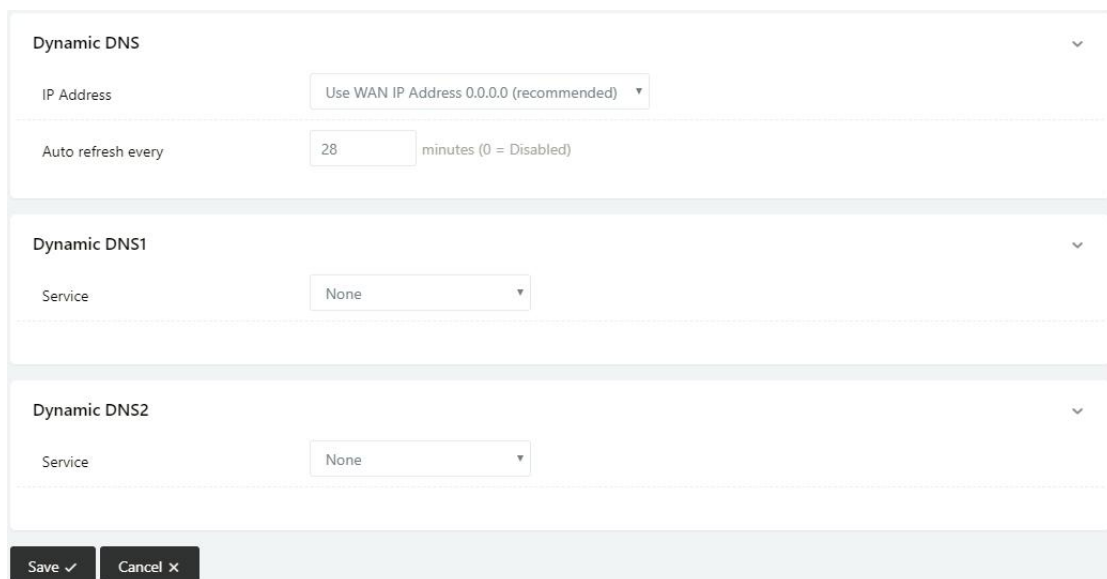

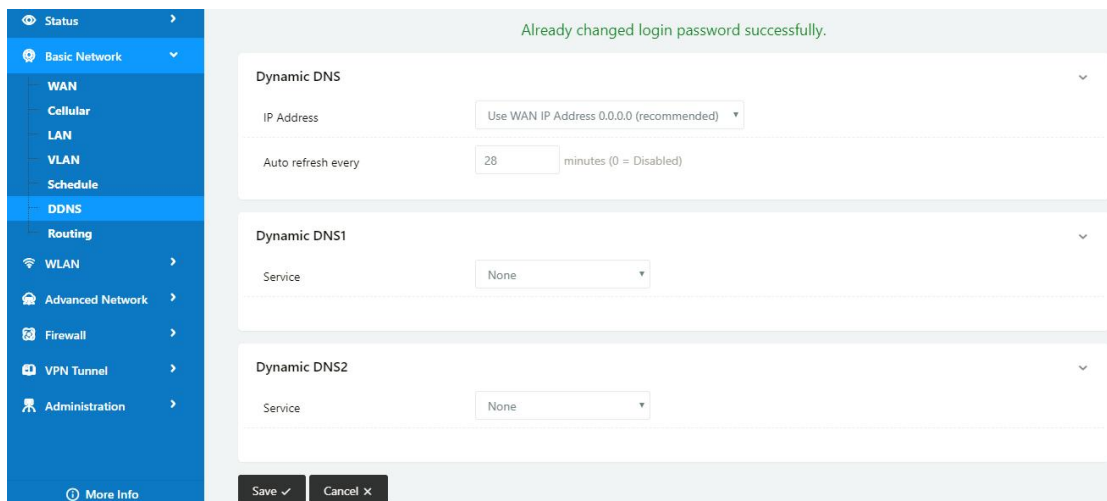

Table 2-5 DDNS Setting Instruction

Parameter	Instruction	Default
IP address	Default is standard DDNS protocol, for customized protocol, please contact Wlink engineer. Usually, use default IP 0.0.0.0	
Auto refresh time	Set the interval of the DDNS client obtains new IP, suggest 240s or above	
Service provider	Select the DDNS service provider that listed.	

Step 2 Please Click “Save” to finish.

---End

2.4.7 Routing Setting

Step 1 Basic Network->Routing to enter the DDNS setting GUI.

The screenshot displays the router's configuration interface for the Routing section. On the left is a blue sidebar menu with options like Status, Basic Network, WAN, Cellular, LAN, VLAN, Schedule, DDNS, Routing, WLAN, Advanced Network, Firewall, VPN Tunnel, and Administration. The 'Routing' option is highlighted. The main area shows three expandable sections:

- Current Routing Table:** A table with columns for Destination, Gateway / Next Hop, Subnet Mask, Metric, and Interface. It lists two routes: 192.168.1.0 (Gateway: *, Subnet Mask: 255.255.255.0, Metric: 0, Interface: LAN) and 127.0.0.0 (Gateway: *, Subnet Mask: 255.0.0.0, Metric: 0, Interface: lo).
- Static Routing Table:** A form for adding static routes with fields for Destination, Gateway (0.0.0.0), Subnet Mask, Metric (0), and Interface (LAN). An 'Add +' button is present.
- Miscellaneous:** Configuration options including Mode (Gateway), RIPv1 & v2 (Disabled), DHCP Routes (checked), and Spanning-Tree Protocol (unchecked).

At the bottom of each section are 'Save' and 'Cancel' buttons.

Table 2-6 Routing Setting Instruction

Parameter	Instruction	Default
Destination	Router can reach the destination IP address.	
Gateway	Next hop IP address which the router will reach	
Subnet Mask	Subnet mask for destination IP address	
Metric	Metrics are used to determine whether one particular route should be chosen over another.	
Interface	Interface from router to gateway.	
Description	Describe this routing name.	

Step 2 Please Click “ Save “ to finish.

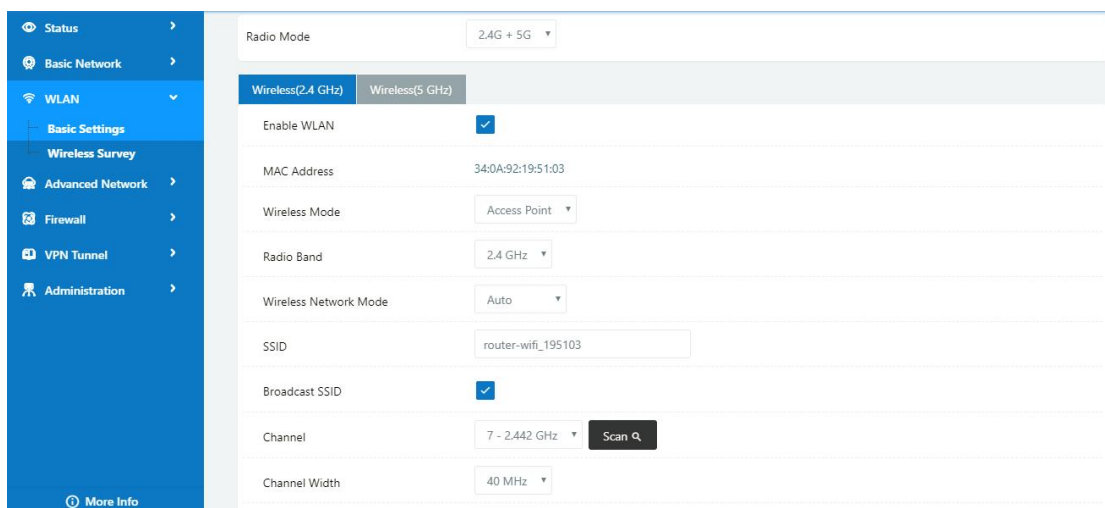

----End

2.5 WLAN Setting

It's mainly for router which support Wi-Fi, you can modify and configure WLAN parameter through Web GUI, below is the common setting.

2.5.1 Basic Setting

Step 1 WLAN->Basic Setting to configure relative parameter

Wireless(2.4 GHz)	Wireless(5 GHz)
Enable WLAN	<input checked="" type="checkbox"/>
MAC Address	34:0A:92:19:51:03
Wireless Mode	Access Point ▾
Radio Band	2.4 GHz ▾
Wireless Network Mode	Auto ▾
SSID	router-wifi_195103
Broadcast SSID	<input checked="" type="checkbox"/>
Channel	7 - 2.442 GHz ▾ Scan 🔍
Channel Width	40 MHz ▾
Control Sideband	Lower ▾
Maximum Clients	128 (range: 1 - 255)
Security option	Disabled ▾

Wireless(2.4 GHz)	Wireless(5 GHz)
Enable WLAN	<input checked="" type="checkbox"/>
MAC Address	34:0A:92:19:51:04
Wireless Mode	Access Point ▼
Radio Band	5 GHz ▼
Wireless Network Mode	Auto ▼
SSID	router-wifi_195103_5G
Broadcast SSID	<input checked="" type="checkbox"/>
Channel	149 - 5.745 GHz ▼ Scan 🔍
Channel Width	80 MHz ▼
Control Sideband	Lower ▼
Maximum Clients	128 (range: 1 - 255)
Security option	Disabled ▼

Table 2-7 Basic of WLAN Setting Instruction

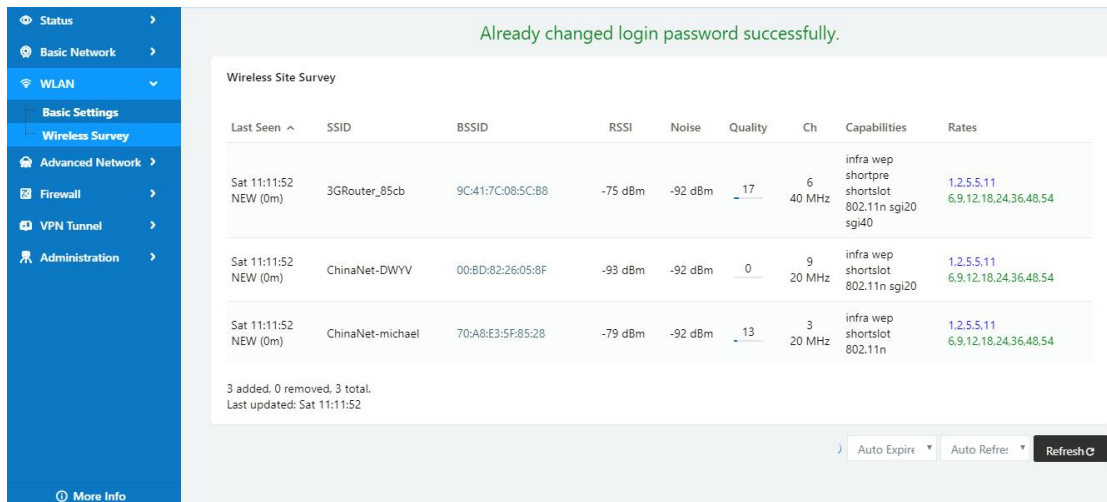

Parameter	Instruction	Default
Radio Mode	2.4G+5G mode as default. Support 2.4G, 5G modes optional. 2.4G+5G model, Wi-Fi bandwidth for 683Mbps 2.4G model, Wi-Fi bandwidth for 300Mbps 5G model, Wi-Fi bandwidth for 866Mbps	
Enable wireless	Enable or Disable the Wireless	
Wireless mode	Support AP mode.	
Wireless Network protocol	Support Auto/b/g/n optional for 2.4G. Support Auto/A/N optional for 2.4G.	
SSID	The default is router, can be modified as per application.	
Channel	The channel of wireless network, suggest keep the default	
Channel Width	20MHz and 40MHz alternative for 2.4G. 20MHz, 40MHz and 80MHz alternative for 2.4G.	
Security	Support various encryption method as requested.	

Step 2 Please click “Save” to finish.

----End

2.5.2 Wireless Survey

Step 1 WLAN> Wireless Survey to check survey.

2.6 Advanced Network Setting

2.6.1 Port Forwarding

Step 1 Advanced Network > Port Forwarding to enter the GUI, you may modify the router name, Host name and Domain name according to the application requirement.

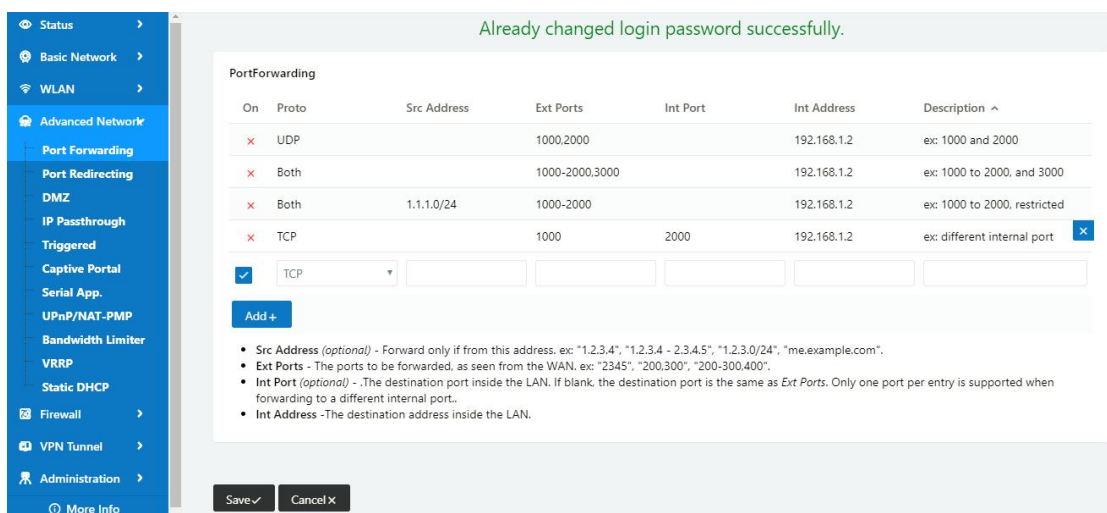

Table 2-8 Port Forwarding Instruction

Parameter	Instruction	Default
Protocol	Support UDP, TCP, both UDP and TCP	
Src. Address	Source IP address. Forward only if from this address.	

Parameter	Instruction	Default
Ext. Ports	External ports. The ports to be forwarded, as seen from the WAN.	
Int. Port	Internal port. The destination port inside the LAN. If blank, the destination port is the same as Ext Ports. Only one port per entry is supported when forwarding to a different internal port.	
Int. Address	Internal Address. The destination address inside the LAN.	
Description	Remark the rule	

Step 2 Please click "save" to finish

----End

2.6.2 Port Redirecting

Step 1 Advanced Network > Port Redirecting to enter the GUI, you may modify the router name, Host name and Domain name according to the application requirement.

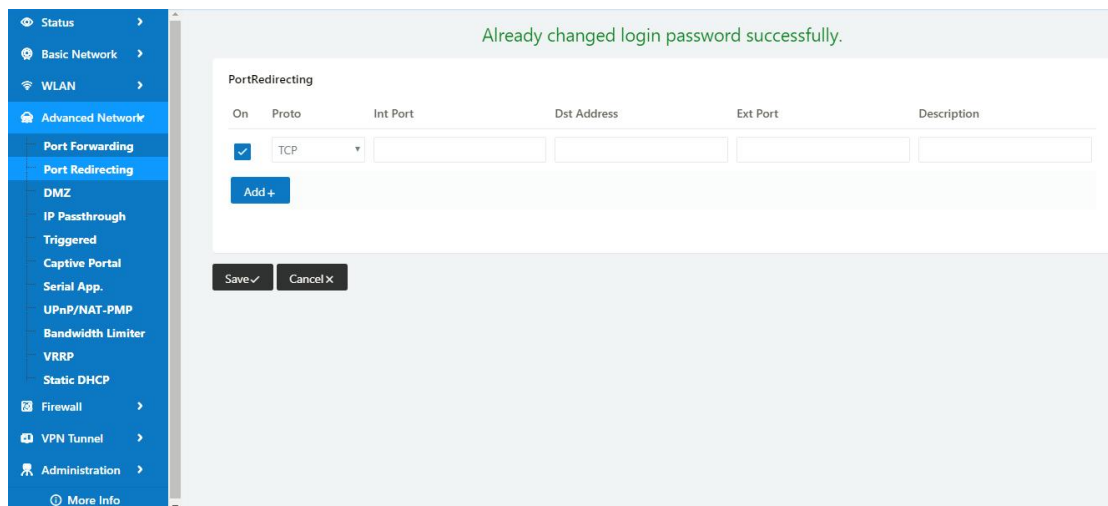

Table 2-9 Port Redirecting Instruction

Parameter	Instruction	Default
Protocol	Support UDP, TCP, both UDP and TCP	
Int Port	Internal port.	
Dst. Address	The redirecting IP address.	
Ext. Ports	External port for redirection.	
Description	Remark the rule	

Step 2 Please click "save" to finish.

Configuration Instance

Please check lock bank configuration in the chapter 3 as reference.

----End

2.6.3 DMZ Setting

Step 1 Advanced Network> DMZ to check or modify the relevant parameter.

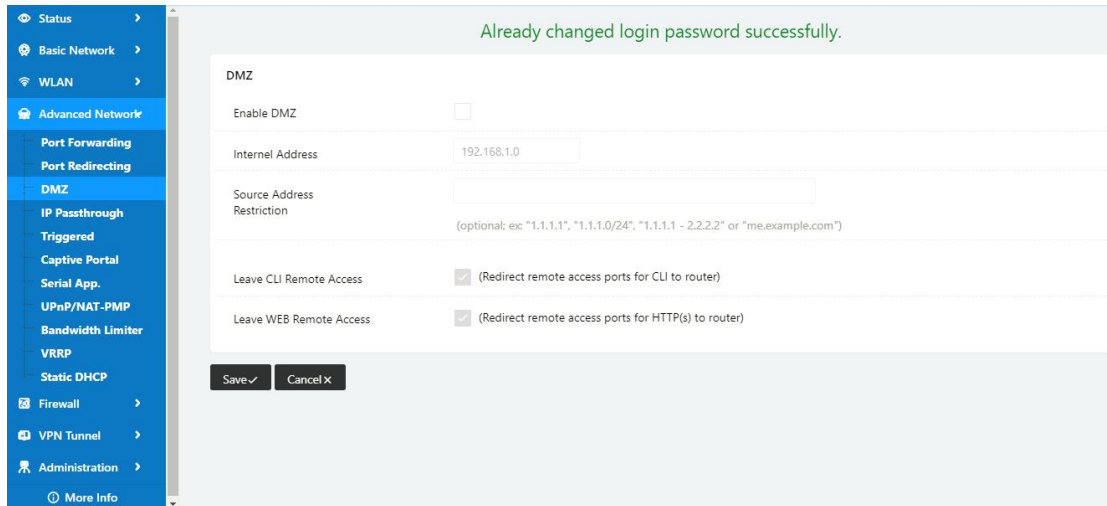

Table 2-10 DMZ Instruction

parameter	Instruction	Default
Destination Address	The destination address inside the LAN.	
Source Address Restriction	If no IP address inside, it will allow all IP address to access. If define IP address, it will just allow the defined IP address to access.	
Leave Remote Access		

Step 2 Please click "save" to finish

----End

2.6.4 IP Passthrough Setting

Step 1 Advanced Network> IP Passthrough to check or modify the relevant parameter.

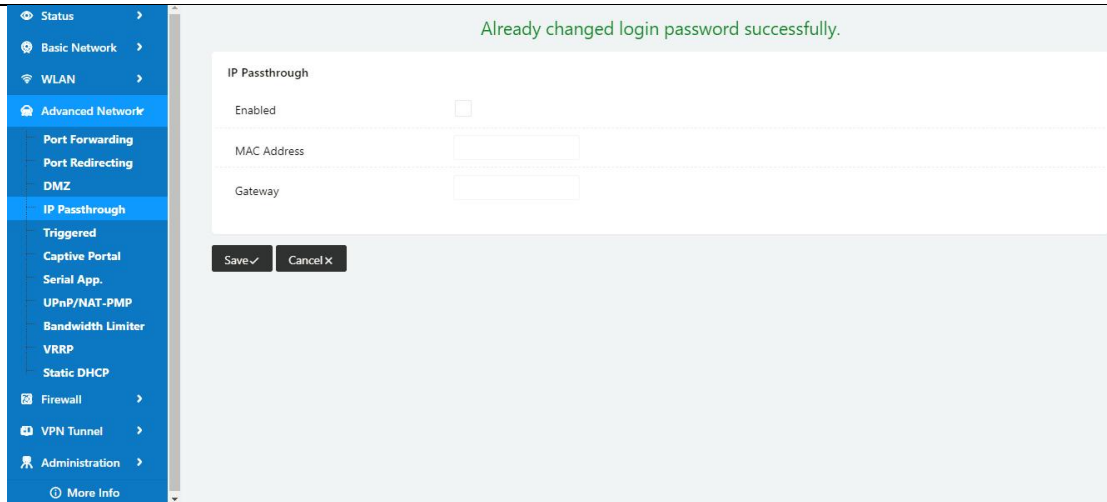

Table 2-11 IP Passthrough Instruction

parameter	Instruction	Default
Enable	Enable IP Passthrough	
MAC Address	Enable DHCP of device. Configure device Mac. Device will be assigned SIM IP.	
Gateway	If WL-G930 connect to multiple device, input other device gateway. The device might access to router GUI.	

Step 2 Please click "save" to finish

----End

2.6.5 Triggered Setting

Step 1 Advanced Network> Triggered to check or modify the relevant parameter.

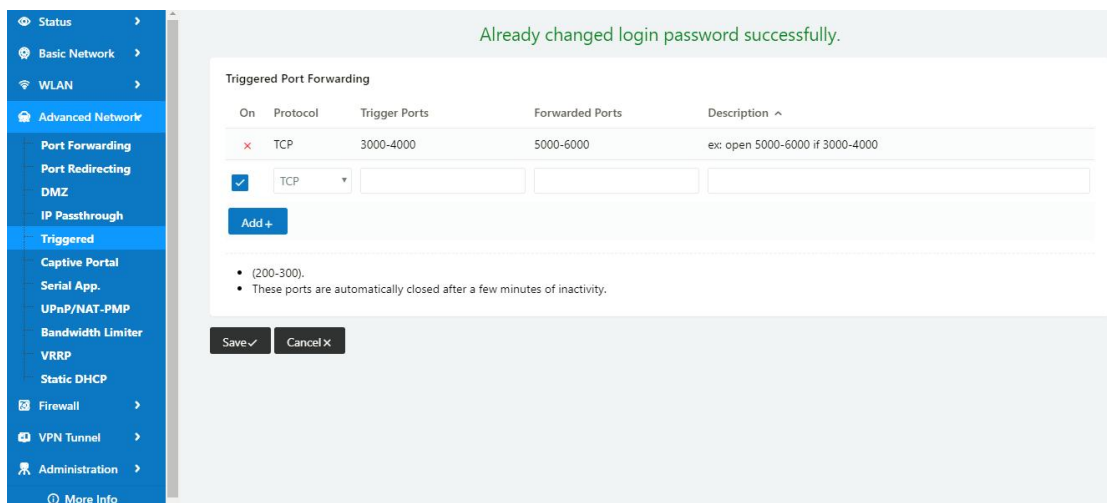

Table 2-12 Triggered Instruction

parameter	Instruction	Default
Protocol	Support UDP, TCP, both UDP and TCP	
Triggered Ports	Trigger Ports are the initial LAN to WAN "trigger".	
Transferred Ports	Forwarded Ports are the WAN to LAN ports that are opened if the "trigger" is activated.	
Note	Port triggering opens an incoming port when your computer is using a specified outgoing port for specific traffic.	

Step 2 Please click "save" to finish.

---End

2.6.6 Captive Portal

Step 1 Advanced Network> Triggered to check or modify the relevant parameter.

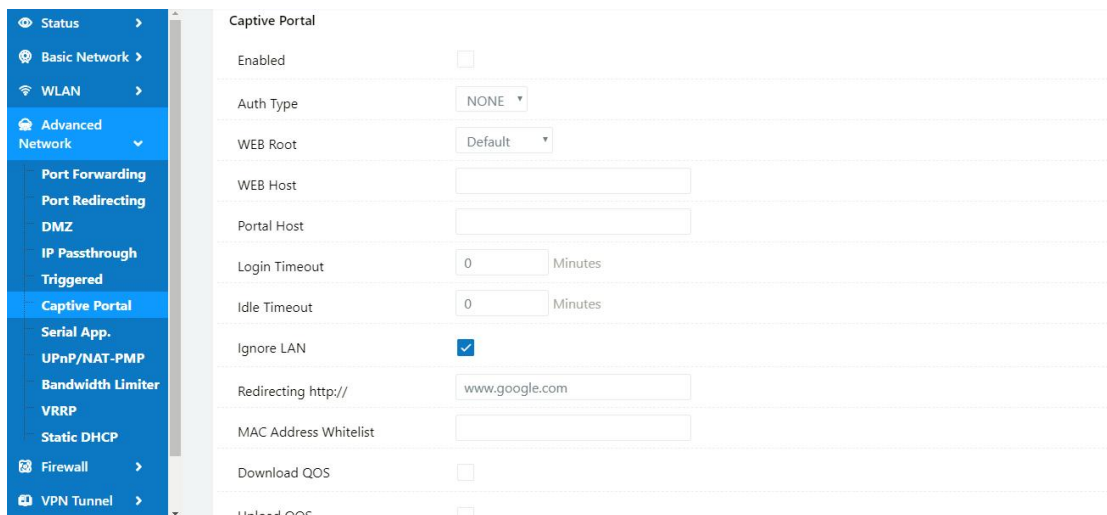

Table 2-13 Captive Portal Instruction

Parameter	Instruction	Default
Enable	Enable Captive portal feature.	
Auth Type	Reserved.	
Web Root	Choose captive portal file storage path. Default: Captive portal file is in the firmware as default. In-storage: Captive portal file is in router's Flash. Ex-storage: Captive portal file is in extended storage such as SD card.	

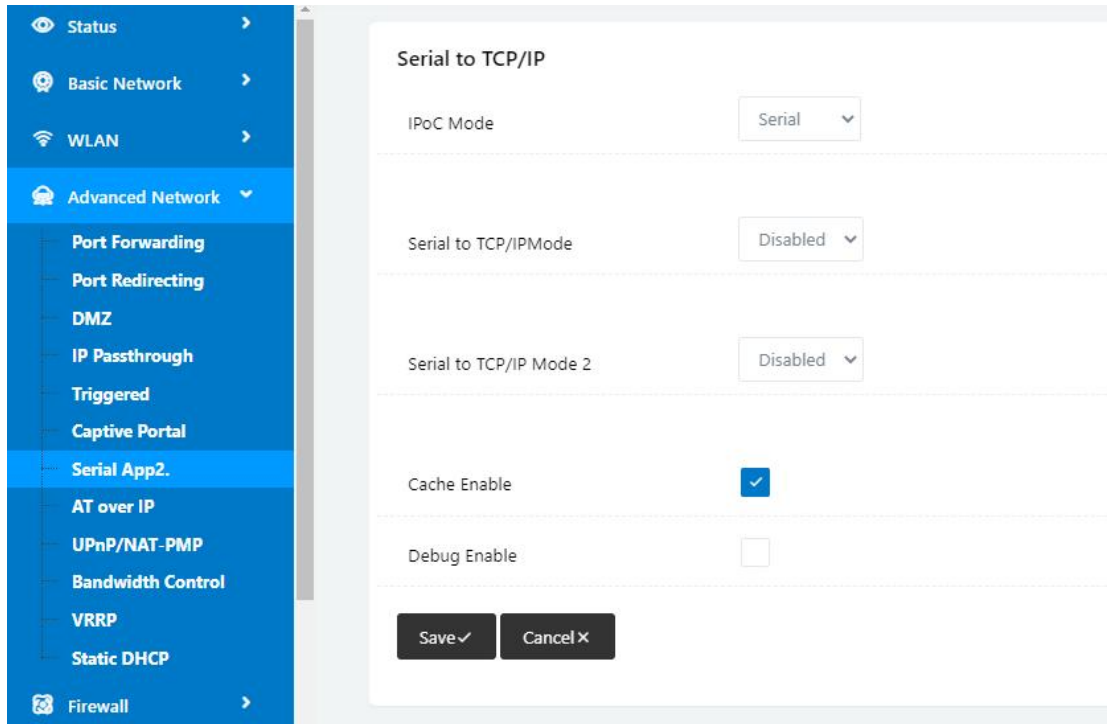

Parameter	Instruction	Default
Web Host	Configure domain name for the captive portal access. For example, Configure as wlink.tech.com, we might directly access to captive portal page in the website as wlink.tech.com	
Portal Host	Reserved.	
Logged Timeout	Maximum time user has connectivity. User need to re-login Captive Portal page after defined time.	
Idle Timeout	Maximum time user has connectivity if no network activity from Wi-Fi User.If User need to re-login Captive page to surf internet.	
Ignore LAN	If enabled, LAN devices will bypass the Captive Portal page.	
Redirecting	Router will redirect to the defined link after accepting the terms and conditions on the Captive Portal page.	
MAC Whitelist	No captive portal page for Wi-Fi device.	
Download QoS	Enable to apply the Download and Upload per user limits.	
Upload QoS	Maximum download speed available to each user.	

Step 2 Please click "save" to finish.

----End

2.6.7 Serial App. Setting

Step 1 Advanced Network> Serial App to check or modify the relevant parameter.

Serial to TCP/IP Mode	Client
Server IP/Port	8.8.8.8 : 40002
Socket Type	TCP
Socket Timeout	500 (milliseconds)
Serial Timeout	500 (milliseconds)
Packet Payload	1024 (bytes)
Heart-Beat Content	router_00001
Heart-Beat Interval	2 (seconds)
Port Type	RS232
Baud Rate	57600
Parity Bit	none
Data Bit	8
Stop Bit	1

Table 2-14 Serial App Instruction

Parameter	Instruction	Default
IPoc Mode	Transparent serial port and Modbus options. Modbus is suitable for RS485 port only.	
Serial to TCP/IP Mode	Support two serial ports. Serial to TCP/IP mode for RS232 port application and Serial to TCP/IP Mode 2 for RS485 port application.	
Serial to TC/IP mode	Support Disable, Server and Client mode. Such as Client.	
Server IP/Port	IP address and domain name are acceptable for Server IP	
Socket Type	Support TCP/UDP protocol	
Socket Timeout	Router will wait the setting time to transmit data to serial port.	
Serial Timeout	Serial Timeout is the waiting time for transmitting the data package that is less the Packet payload. If the last package equals to the Packet payload, Serial port will transmit it immediately. The default setting is 500ms.	
Packet payload	Packet payload is the maximum transmission length for serial port data packet. The default setting is 1024bytes.	
Heart-beat Content	Send heart beat to the defined server to keep router online. Meantime, it's convenient to monitor router from server.	
Heart beat Interval	Heart beat interval time	
Baud Rate	115200 as default	
Parity Bit	None as default	
Data Bit	8bit as default	
Stop Bit	1bit as default	

Step 2 Please click "save" to finish.

----End

2.6.8 AT Over IP

Step 1 Advanced Network> AT over IP to check or modify the relevant parameter.

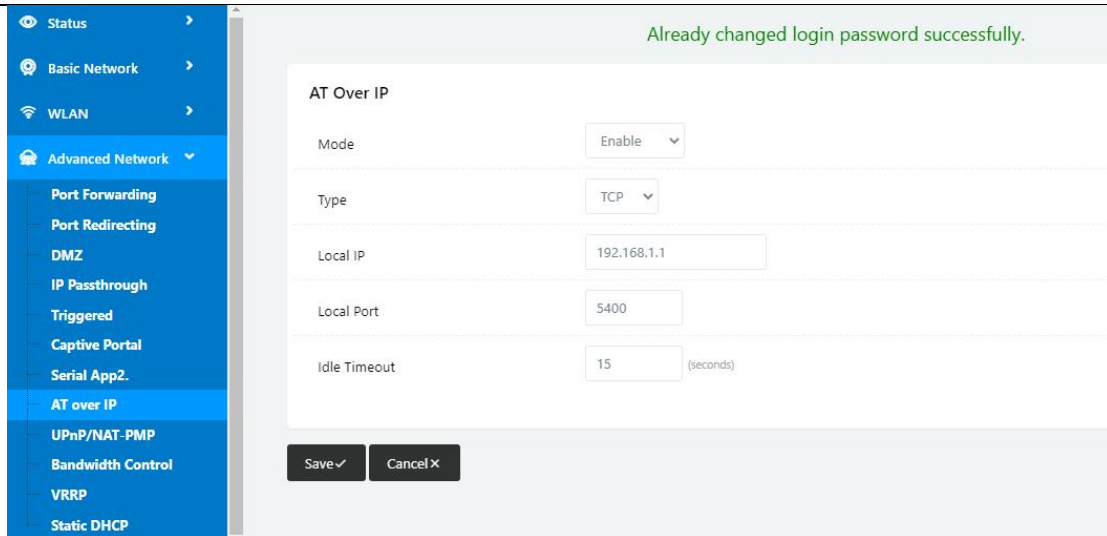

Table 2-15 AT over IP App Instruction

Parameter	Instruction	Default
Mode	Enable/Disable Optional. Disable as default.	
Type	UDP/TCP Optional.	
Local IP	Router LAN IP address which is connected to device.	
Local Port	AT over IP application port for listening port.	
Idle Timeout	The connection will be disconnected if no AT command implement during time.	

Step 2 Please click "save" to finish.

----End

2.6.9 UPnp/NAT-PMP Setting

Step 3 Advanced Network> Upnp/NAT-PMP to check or modify the relevant parameter.

Step 4 Please click "save" to finish.

----End

2.6.10 Bandwidth Control Setting

Step 1 Advanced Network> Bandwidth Control to check or modify the relevant parameter.

Table 2-16 Bandwidth Control Instruction

Parameter	Instruction	Default
Max Available Download	Speed limit for router.	
Max Available Upload	Speed limit for router.	
IP/ IP Range/ MAC Address	Limit devices speed for specified IP/IP Range/ MAC Address.	
DL Rate	Mix Download rate	
DL ceil	Max download rate	
UL Rate	Mix Upload rate	
UL ceil	Max upload rate	

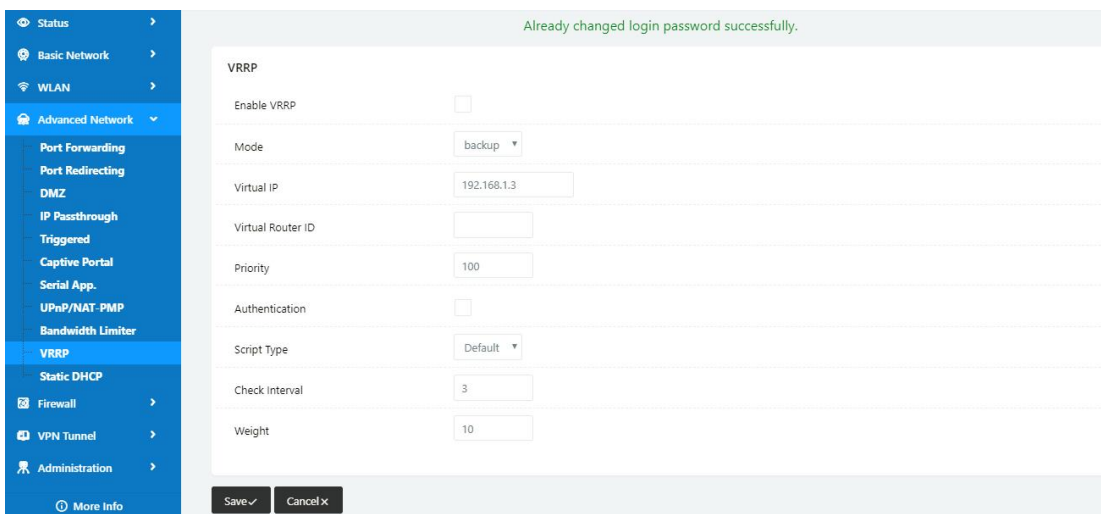

Priority	The priority of a specific user.	
Default Class	If no specified IP/MAC, the download and upload limit for total speed for all of device.	

Step 2 Please click "save" to finish.

----End

2.6.11 VRRP Setting

Step 1 Advanced Network> VRRP to check or modify the relevant parameter.

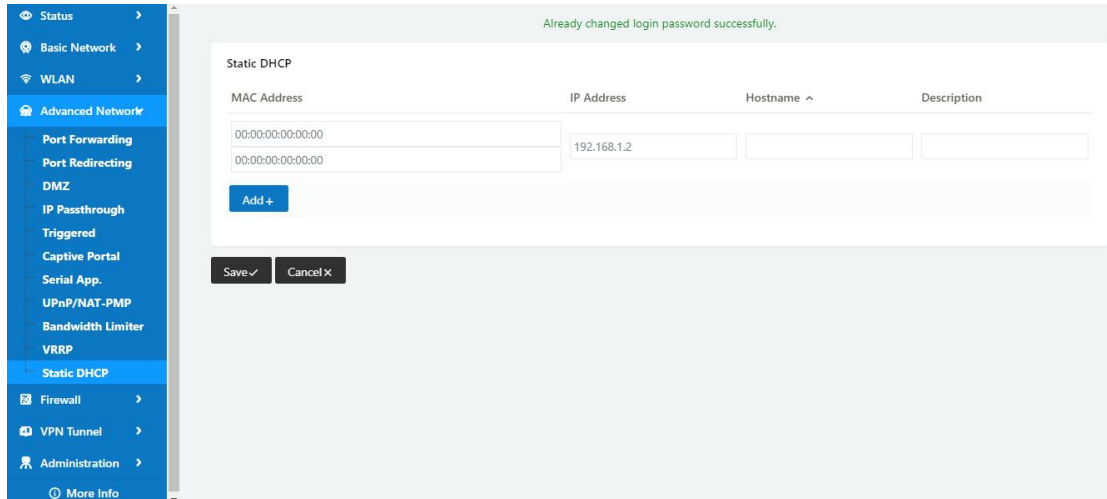

Step 2 Please click "save" to finish.

----End

2.6.12 Static DHCP Setting

Step 1 Advanced Network> Static DHCP to check or modify the relevant parameter.

Step 2 Please click "save" to finish.

----End

2.7 Firewall

2.7.1 IP/URL Filtering

Step 1 Firewall> IP/URL Filtering to check or modify the relevant parameter.

Table 2-17 IP/URL Filtering Instruction

Parameter	Instruction	Default
IP/MAC/Port Filtering	Support IP address, MAC address and port filter. Accept/Drop options for filter policy.	
Key Word Filtering	Support key word filter.	
URL Filtering	Support URL filter.	
Access Filtering	Support Access Filter.	

Step 2 Please click "save" to finish.

---End

2.7.2 Domain Filtering

Step 1 Firewall> Domain Filtering to check or modify the relevant parameter.

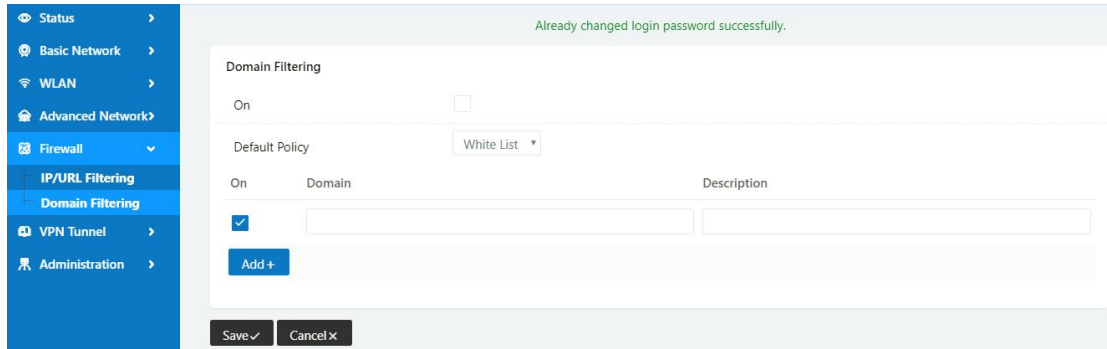

Table 2-18 Domain Filtering Instruction

Parameter	Instruction	Default
Default Policy	Support black list and white list	
Local IP Address	Local IP address for LAN.	
Domain	Support Domain filter.	

Step 2 Please click "save" to finish.

----End

2.8 VPN Tunnel

2.8.1 Wireguard Setting

Step 1 VPN Tunnel> Wireguard to check or modify the relevant parameter.

The screenshot shows the 'Wireguard' configuration page. On the left is a navigation menu with options like Status, Basic Network, Advanced Network, Firewall, VPN Tunnel, Wireguard, GRE, OpenVPN Client, OpenVPN Server, PPTP/L2TP Server, PPTP/L2TP Client, L2TP V3, IPSec, DMVPN, and Administration. The main area contains the following fields:

- Enabled:** A checked checkbox.
- Mode:** A dropdown menu set to 'Client'.
- Peer IP/Port:** Two input fields containing '192.168.1.2' and '51821'.
- Local Key:** An input field containing 'test'.
- Local IP/Mask:** An input field containing '192.168.88.1/24' with an example 'ex. 192.168.88.5/24'.
- Peer Key:** An input field containing 'test'.
- Preshared Key:** An empty input field.
- Persistent Keepalive:** An input field containing '25'.
- Allowed IPS:** An input field containing '0.0.0.0/0' with an example 'ex. 192.168.88.0/24 or 192.168.88.0/24,192.168.99.0/24'.
- Peer Subnet IP/Mask:** An empty input field with the same example as Allowed IPS.

At the bottom are 'Save ✓' and 'Cancel ✕' buttons.

Table 2-19 Wireguard Client Instruction

Parameter	Instruction	Default
Enable	Eenable Wireguard.	
Model	Wireguard client and server modes optional	
Peer IP/Port	Server IP and port	
Local Key	VPN local key	
Local IP/Mask	Wireguard VPN tunnel local IP and mask. The VPN local IP address and peer IP address are different subnet segment.	
Peer Key	VPN peer key	
Preshared Key	Wireguard Pre-shared key	
Keepalive	Keepalive interval,unit for second	
Allowed IPs	Allowed VPN subnet IP addresses	
Peer Subnet IP/Mask	Wireguard VPN tunnel Peer IP and mask.	

Wireguard

Enabled

Mode

Bind Port

Local Key

Local IP/Mask ex. 192.168.88.5/24

Peer Subnet IP/Mask ex. 192.168.88.0/24 or 192.168.88.0/24,192.168.99.0/24

Allowed IPS Persistent Keepalive Peer Key

Table 2-20 Wireguard Sever Instruction

Parameter	Instruction	Default
Enable	Eenable Wireguard.	
Model	Wireguard client and server modes optional	
Bind Port	Wireguard server port	
Local Key	VPN local key	
Local IP/Mask	Wireguard VPN tunnel local IP and mask. The VPN server local IP address and client IP address are different subnet segments.	
Preshared Key	Wireguard Pre-shared key	
Keepalive	Keepalive interval,unit for second	
Allowed IPs	Allowed VPN subnet IP addresses	
Peer Key	VPN peer key	

Step 2 Please click "save" to finish.

Configuration Instance

Please check lock bank configuration in the chapter 3 as reference.

----End

2.8.2 Zerotier Setting

Step 1 VPN Tunnel> Zerotier to check or modify the relevant parameter.

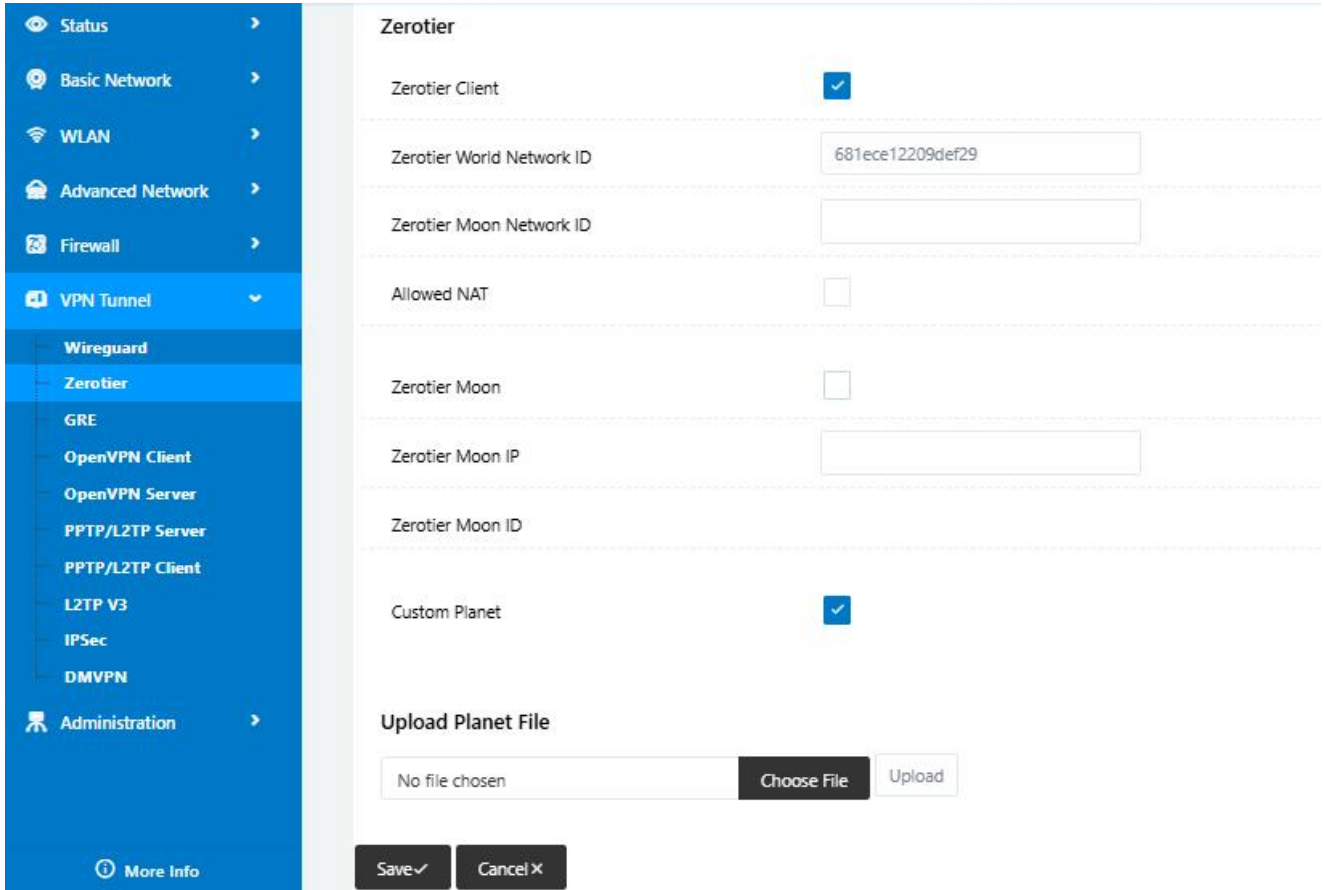

Table 2-21 Zerotier Instruction

Parameter	Instruction	Default
Enable	Enable Zerotier Client mode	Disable
Zerotier World Network ID	A unique 16-digit identifier for your ZeroTier network. Nodes must join using this ID.	Null
Zerotier Moon Network ID	ZeroTier Moon server Network ID	Null
Allowed NAT	Enable NAT in zerotier network.It function will be configured with zerotier IP management together to allow the defined zerotier client access.	Disable
Zerotier Moon	Private Root Servers as Moon server	Disable
Zerotier Moon IP	Moon server IP address	Null
Zerotier Moon ID	A unique 16-digit identifier for private ZeroTier network.	Null
Custom Planet	Custom Planet configuration	Disable

Parameter	Instruction	Default
Allowed IPs	Allow access to other Zerotier clients. IP is the LAN segment address of other ZeroTier clients; The gateway is a VPN address of other ZeroTier clients.The IP and gateway must correspond to the same routing.	Null
Upload Planet File	Upload the updated Planet file	Null

Step 2 Please click “save” to finish.

Configuration Instance

Please check lock bank configuration in the chapter 3 as reference.

----End

2.8.3 GRE Setting

Step 1 VPN Tunnel> GRE to check or modify the relevant parameter.

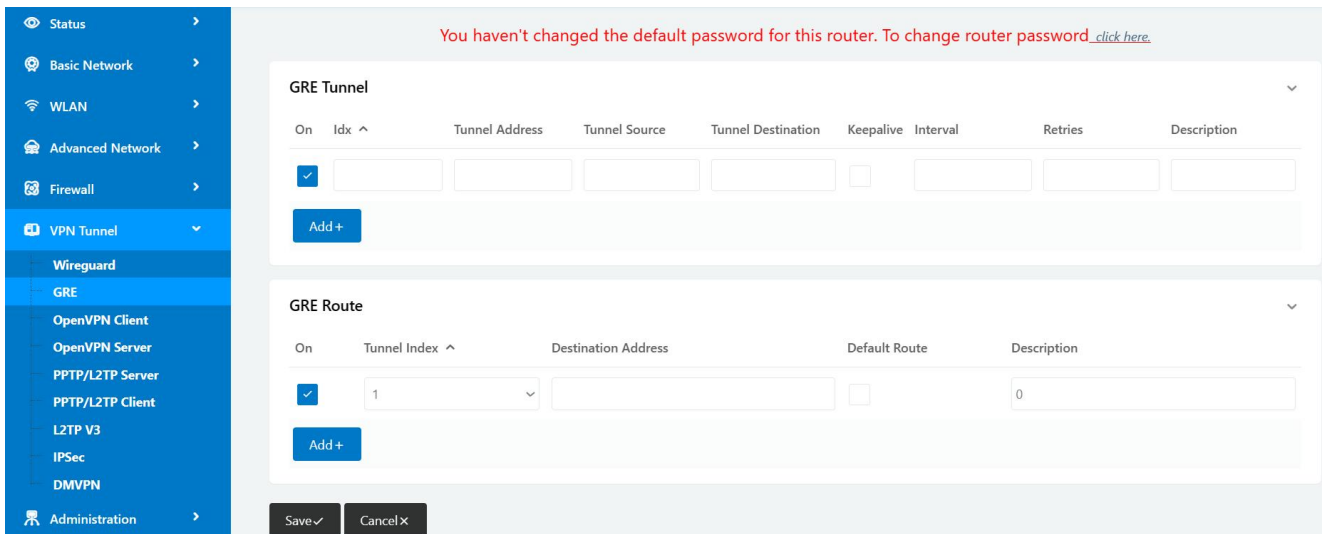

Table 2-22 GRE Instruction

Parameter	Instruction	Default
Idx	GRE tunnel number	
Tunnel Address	GRE Tunnel local IP address which is a virtual IP address.	
Tunnel Source	Router’s 5G/WAN IP address.	
Tunnel Destination	GRE Remote IP address. Usually a public IP address	
Keep alive	GRE tunnels keep alive to keep GRE tunnel connection.	

Parameter	Instruction	Default
Interval	Keep alive interval time.	
Retries	Keep alive retry times. After retrying times, GRE tunnel will be re-established.	
Description		

Step 2 Please click “save” to finish.

Configuration Instance

Please check lock bank configuration in the chapter 3 as reference.

---End

2.8.4 OpenVPN Client Setting

Step 1 VPN Tunnel> OpenVPN Client to check or modify the relevant parameter.

The screenshot displays the 'OpenVPN Client' configuration page. At the top, a red warning message reads: "You haven't changed the default password for this router. To change router password [click here.](#)". Below this, the page is titled "OpenVPN Client" and has tabs for "Client 1" and "Client 2". Under "Client 1", there are sub-tabs for "Basic", "Advanced", "Keys", and "Status". The "Basic" tab is active, showing "VPN Client #1 (Stopped)". The configuration options are as follows:

- Start with WAN:
- Interface Type: TUN
- Protocol: UDP
- Server Address: [] 1194
- Firewall: Automatic
- Authorization Mode: TLS

2.8.5 OpenVPN Server Setting

Step 1 VPN Tunnel> OpenVPN Server to check or modify the relevant parameter.

The screenshot shows the configuration page for OpenVPN Server #1. The left sidebar contains a navigation menu with the following items: Status, Basic Network, WLAN, Advanced Network, Firewall, VPN Tunnel (expanded), Wireguard, ZeroTier, GRE, OpenVPN Client, OpenVPN Server (selected), PPTP/L2TP Server, PPTP/L2TP Client, L2TP V3, IPSec, DMVPN, and Administration. The main content area is titled 'Server 1' and 'Server 2'. Below this, there are tabs for 'Basic', 'Advanced', 'Keys', and 'Status'. The 'Basic' tab is active, showing the following settings for 'VPN Server #1 (Stopped)':

Start with WAN	<input type="checkbox"/>
Interface Type	TUN
Protocol	UDP
Port	1194
Firewall	Automatic
Authorization Mode	TLS
Extra HMAC authorization (tis-auth)	Disabled
VPN subnet/netmask	10.8.0.0 / 255.255.255.0

At the bottom of the configuration area, there are two buttons: 'Save ✓' and 'Cancel ✕'.

The screenshot displays the configuration interface for 'VPN Server #1 (Stopped)'. At the top, there are tabs for 'Server 1' and 'Server 2'. Below these are sub-tabs for 'Basic', 'Advanced', 'Keys', and 'Status'. The 'Basic' tab is selected. The configuration parameters are as follows:

- Start with WAN:** Checked (blue checkmark).
- Interface Type:** TUN (dropdown menu).
- Protocol:** UDP (dropdown menu).
- Port:** 1194 (text input field).
- Firewall:** Automatic (dropdown menu).
- Authorization Mode:** TLS (dropdown menu).
- Extra HMAC authorization (tls-auth):** Disabled (dropdown menu).
- VPN subnet/netmask:** 10.8.0.0 and 255.255.255.0 (two text input fields).

Table 2-27 Basic of OpenVPN Instruction

Parameter	Instruction	Default
Start with WAN	Enable the OpenVPN feature for 4G/3G/WAN port.	
Interface Type	Tap and Tun type are optional. Tap is for bridge mode and Tunnel is for routing mode.	
Protocol	UDP and TCP optional.	
Server Port	The OpenVPN server public IP address and port.	
Firewall	Auto, External only and Custom are optional	
Authorization Mode	TLS, Static key and Custom are optional.	
Username/Password Authentication	As the configuration requested.	
HMAC authorization	As the configuration requested. Bi-directional, Incoming, Outgoing optional.	Disable
VPN subnet/netmask	OpenVPN server subnet ip address and mask.	NULL

2.8.6 PPTP/L2TP Sever Setting

Step 1 VPN Tunnel> PPTP/L2TP Sever to check or modify the relevant parameter.

The screenshot shows the configuration page for the PPTP/L2TP Server. The left sidebar contains a navigation menu with options like Status, Basic Network, WLAN, Advanced Network, Firewall, VPN Tunnel, Wireguard, ZeroTier, GRE, OpenVPN Client, OpenVPN Server, PPTP/L2TP Server (selected), PPTP/L2TP Client, L2TP V3, IPSec, DMVPN, and Administration. The main content area displays the following settings:

- Enable:** Checked (blue box).
- Local IP Address/Netmask:** 192.168.1.1 / 255.255.255.0
- Remote IP Address Range:** 172.19.0.1 - 172.19.0.6 (6)
- Broadcast Relay Mode:** Disabled (with a red warning: "Enabling this may cause HIGH CPU usage")
- Protocol Type:** PPTP
- Encryption:** MPPE-128
- DNS Servers:** 0.0.0.0
- WINS Servers:** 0.0.0.0
- MTU:** 1450

Table 2-31 PPTP/L2TP Server Basic Instruction

parameter	Instruction	Default
Enable	VPN enable	Disable
Local IP address/Mask	Router LAN IP address. It will be configured as the LAN IP automatically.	NULL
Remote IP Add Range	Remote VPN IP address range	
Broadcast Relay mode	Broadcast relay mode as Disabled, LAN to VPN client, VPN client to LAN, Both optional	Disable
Protocol Type	PPTP/L2TP Optional	PPTP
Encryption	None/MPPE-128 optional	None
DNS Servers	VPN Domain Name Resolution Server	0.0.0.0
WINS servers	VPN Domain Name Resolution Server which is based on 机的 NetBIOS of WIN OS.	0.0.0.0
MTU	Maximum Transmission Unit(MTU) for transmission traffic	1450

parameter	Instruction	Default
MRU	Maximum Transmission Unit(MTU) for receive traffic	1450
Custom Configuration	VPN Custom Configuration	NULL
PPTP/L2TP Client List	Configure VPN name, VPN static IP and VPN client LAN IP address/Mask	NULL

Step 2 Please click “save” to finish.

Table 2-42 DI Instruction

Parameter	Instruction	Default
Enable	Enable DI. Port1 is for I/O1 and Port2 is I/O2. Both I/O1 and I/O2 are DI ports	
Mode	Selected from OFF, ON and EVENT_COUNTER modes. OFF Mode: DI from high level(3.3v~5V) to low level(0V), it will trigger alarm. ON Mode: DI from low level(0V) to high level(3.3v~5V), it will trigger alarm. EVENT_COUNTER Model: Enter EVENT_COUNTER mode.	
Filter	Software filtering is used to control switch bounces. Input (1~100)*100ms. Under OFF and ON modes, WL-G930 detects pulse signal and compares with first pulse shape and last pulse shape. If both are the same level, WL-G930 will trigger alarm.	

Parameter	Instruction	Default
	Under EVENT_COUNTER mode, if first pulse shape and last pulse shape are not the same level, WL-G930 will trigger alarm according to Counter Action setting.	
Counter Trigger	Available when DI under Event Counter mode Input from 0 to 100. (0=will not trigger alarm) It will trigger alarm when counter reaches this value. After triggering alarm, DI will keep counting but no trigger alarm again.	
Counter Period	It's a reachable IP address. Once the ICMP check is failed, GRE will be established again.	
Counter Recover	it will re-count after counter trigger alarm. The value is 0~30000(*100ms). 0 means no counter.	
Counter Action	HI_TO_LO and LO_TO_HI is available when DI under Event Counter mode. In Event Counter mode, the channel accepts limit or proximity switches and counts events according to the ON/OFF status. When LO_TO_HI is selected, the counter value increase when the attached switch is pushed. When HI_TO_LO is selected, the counter value increases when the switch is pushed and released.	
Counter Start	Available when DI under EVENT_COUNTER mode. Start counting when enable this feature.	
SMS Alarm	The alarm SMS will send to specified phone group. Each phone group include up to 2 phone numbers.	
SMS Content	70 ASCII Char Max	
Number 1	SMS receiver phone number.	
Number 2	SMS receiver phone number.	

Step 2 Please click "save" to finish.

OFF Mode

DI from high level 3.3~5V to low level 0V will be triggered.

ON Mode

Data input from low level 0V to high level 3.3~5V will be triggered.

EVENT_COUNTER Model

The counted number of pulses will be triggered.

Table 2-43 DO Instruction

Parameter	Instruction	Default
Enable	1 DO as selected	
Alarm Source	Digital output initiates according to different alarm source. Select from DI Alarm, SMS Control and M2M Control. Selections can be one or more. DI Alarm: Digital Output triggers the related action when there is alarm from Digital Input. SMS Control: Digital Output triggers the related action when	

Parameter	Instruction	Default
	receiving SMS from the number in phone book. M2M Control: it's not ready.	
Alarm Action	Digital Output initiates when there is an alarm. Selected from "OFF", "ON", "Pulse". OFF: Open from GND when triggered. ON: Short contact with GND when triggered. Pulse: Generates a square wave as specified in the pulse mode parameters when triggered.	
Power on Status	Specify the digital Output status when power on. Selected from OFF and ON. OFF: low high(0V). ON: high lever(4.8-5.0V)	
Keep On	Available when digital output Alarm On Action/Alarm Off Action status is ON, input the Digital Output keep on status time. Input from 0 to 255 seconds. (0=keep on until the next action)	
Delay	Available when enable Pulse in Alarm On Action/Alarm Off Action. The first pulse will be generated after a "Delay" . Input from 0 to 30000ms. (0=generate pulse without delay)	
Low	Available when enable Pulse in Alarm On Action/Alarm Off Action. In Pulse Output mode, the selected digital output channel will generate a square wave as specified in the pulse mode parameters. The low level widths are specified here. Input from 1 to 30000 ms.	
High	Available when enable Pulse in Alarm On Action/Alarm Off Action. In Pulse Output mode, the selected digital output channel will generate a square wave as specified in the pulse mode parameters. The high level widths are specified here. Input from 1 to 30000 ms.	
Output	Available when enable Pulse in Alarm On Action/Alarm Off Action. The number of pulses, input from 0 to 30000. (0 for continuous pulse output)	
SMS Trigger Content	Available when enable SMS Control in Alarm Source. Input the SMS content to enable "Alarm On Action" by SMS (70 ASCII II char max).	
SMS Reply Content	Input the SMS content, which will be sent after DO was triggered. (70 ASCII II char max).	
Number 1	SMS receiver phone number.	

Parameter	Instruction	Default
Number 2	SMS receiver phone number.	

Step 3 Please click "save" to finish.

DO might be customized pulse width ratio: T1, T2 duration and n value.

---End

2.9.10 Configuration Setting

Step 1 Please click " Administrator> Configuration " to do the backup setting

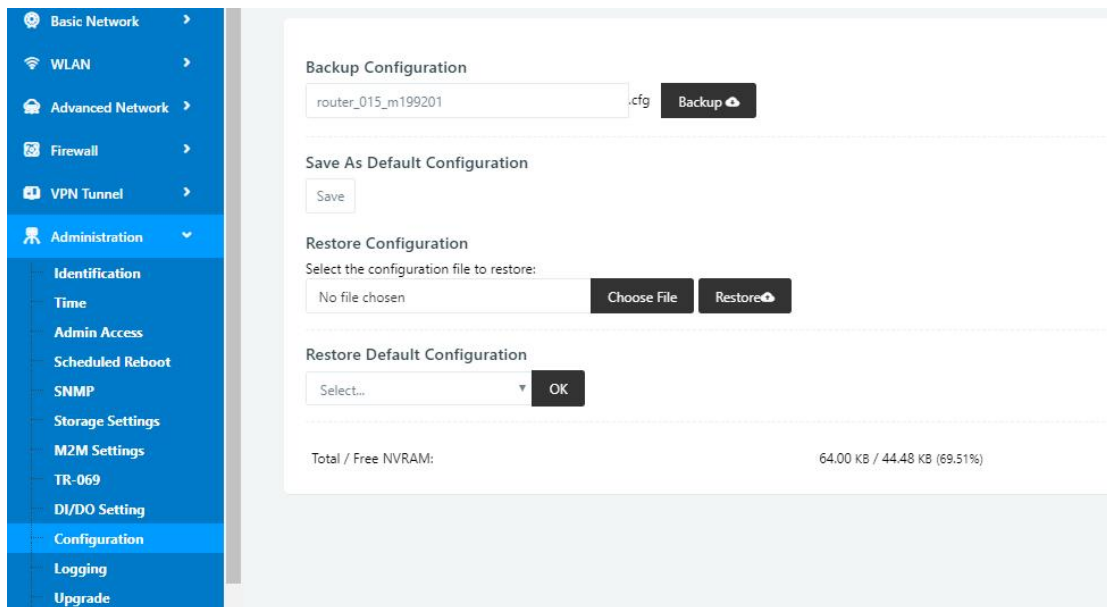

Figure 3-1 Backup and Restore Configuration GUI

Restore Default would lose all configuration information, please be careful.

Step 2 After setting the backup and restore configuration. The system will reboot automatically.

----End

2.9.11 System Log Setting

Step 1 Please click “Administrator> Logging” to start the configuration, you can set the file path to save the log (Local or remote sever).

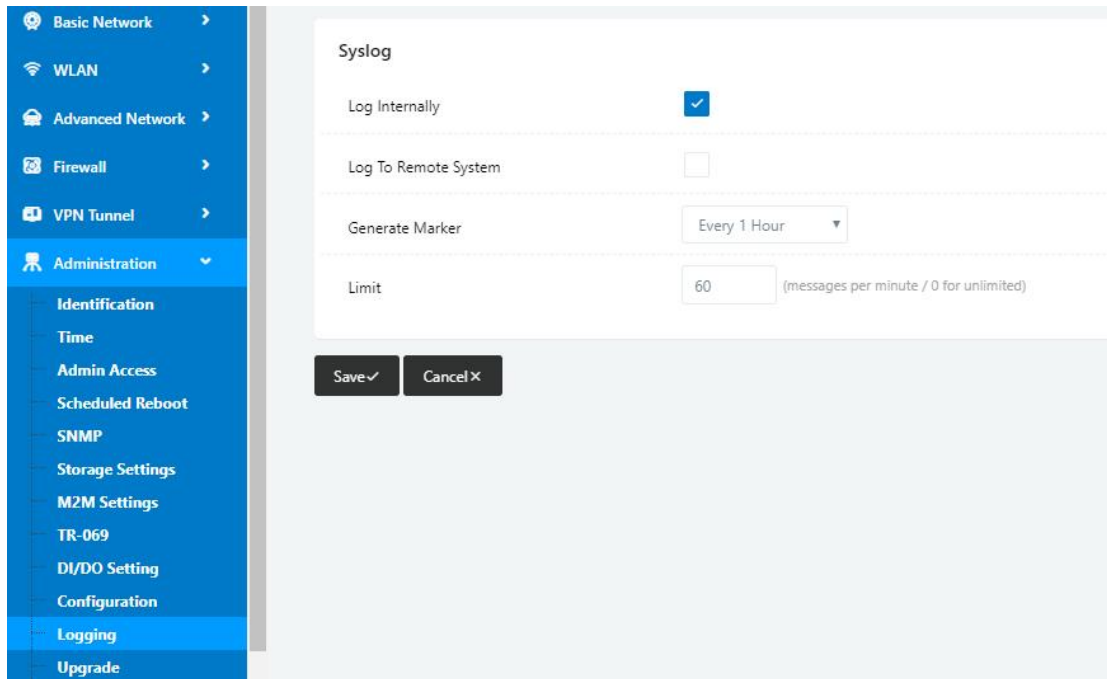

Figure 3-1 System log Setting GUI

Step 2 After configure, please click “Save” to finish.

----End

2.9.12 Firmware upgrade

Step 1 Please click “Administrator>firmware upgrade” to open upgrade firmware tab.

Figure 3-1 Firmware Upgrade GUI

NOTE

Please don't cut off the power during upgrade. The upgrade period will be taken about 4mins.

2.10 “Reset” Button for Restore Factory Setting

If you couldn't enter web interface for other reasons, you can also use this way.

“Reset” button is near to Console port in WL-G930 panel, This button can be used when the router is in use or when the router is turned on.

Press the “RST” button and keep more than 8 seconds till the NET light stopping blink. The system will be reverted to factory.

Table 2-44 System Default Instruction

Parameter	Default setting
LAN IP	192.168.1.1
LAN Subnet Mask	255.255.255.0
DHCP server	Enable
User Name	admin
Password	admin

NOTE

After reboot, the previous configuration would be deleted and restore to factory settings.

3 Configuration Instance

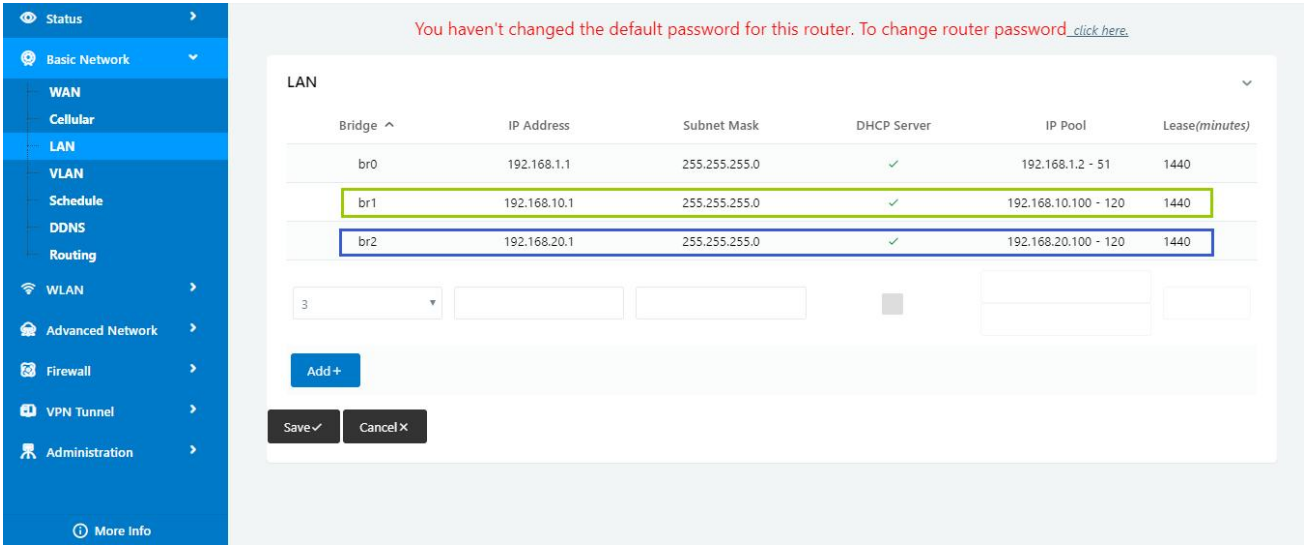

This chapter is mainly for configured test case, there would be some difference between the scheme and real object. But the difference doesn't have any influence to products performance.

3.1 VLAN

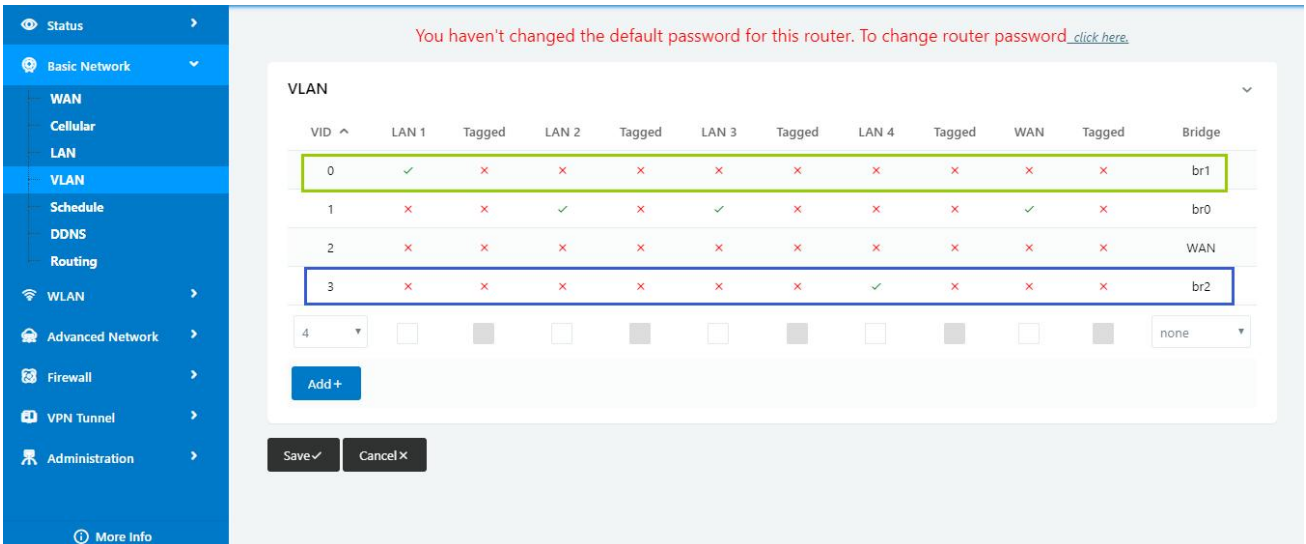

WL-G930 supports VLAN partition based on Ethernet port (LAN0~LAN4)

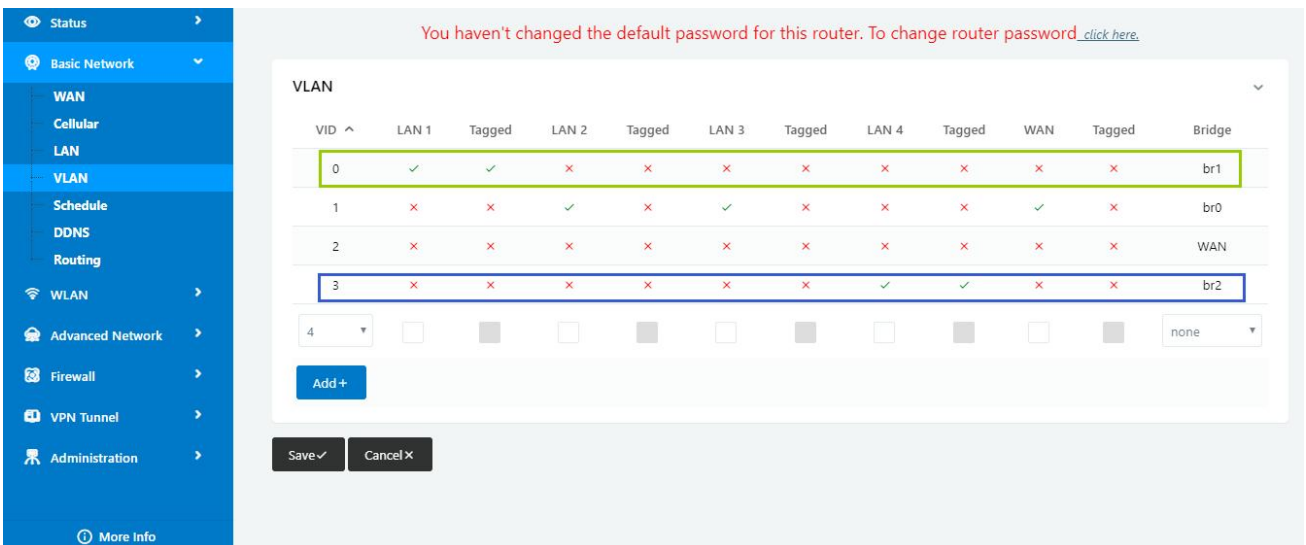

1)Configure LAN with Basic Network.

2) If untag for br1 and br2, it won't be accessed between SW1 and SW2.

3) If tag for br1 and br2, it will be accessed between sw1 and sw2.

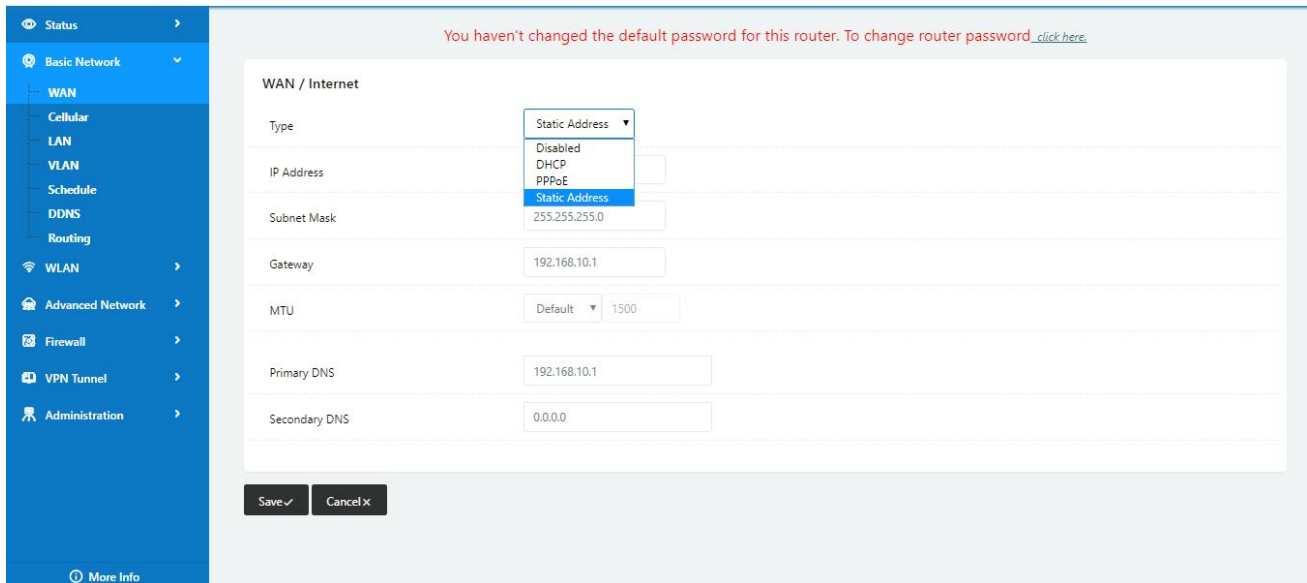

---End

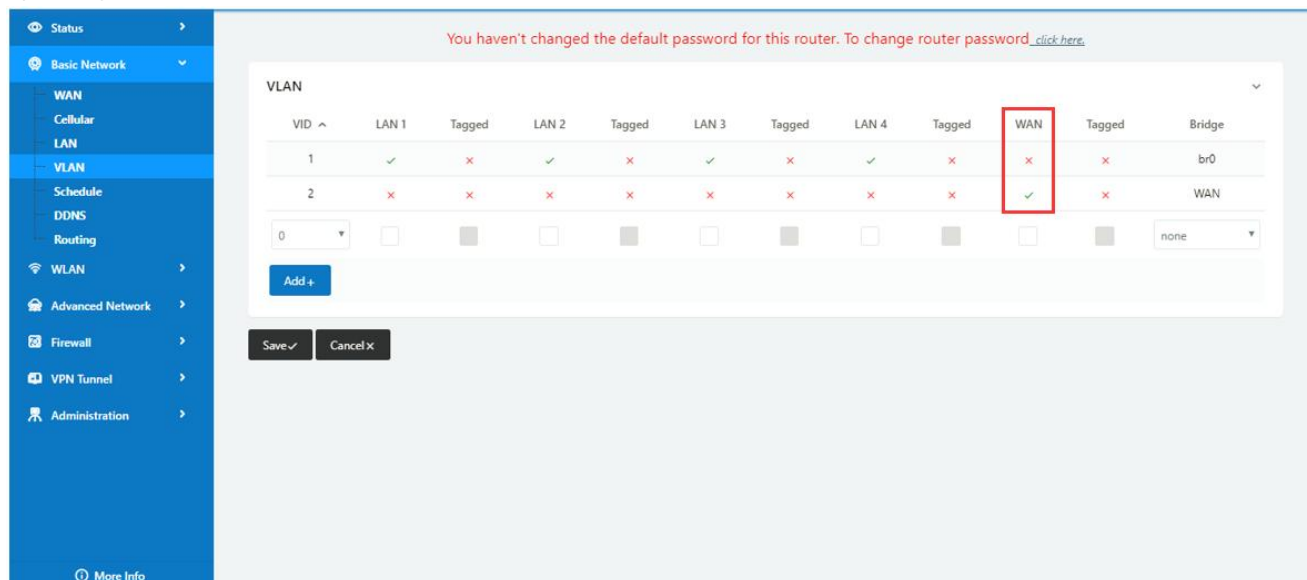

3.2 WAN Backup (WAN as Main, Cellular Backup)

The WAN and Cellular backup feature can quickly switch traffic to Cellular (link2) when WAN (link1) fails, and WL-G930 brings you a stable network experience.

1) Navigate to **Basic Network > WAN**, you may configure the WAN parameters with your situation

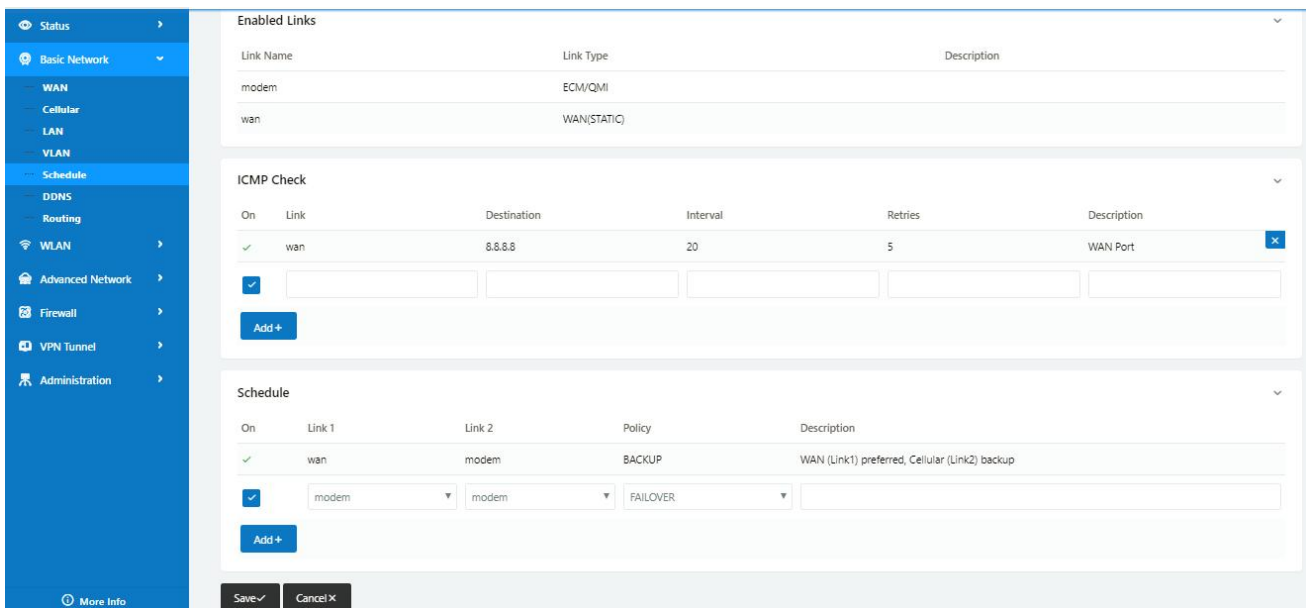

2) Navigate to **Basic Network > VLAN**, enable the LAN1 as WAN Ethernet

3) Navigate to **Basic network > Cellular**, configure the APN as your SIM

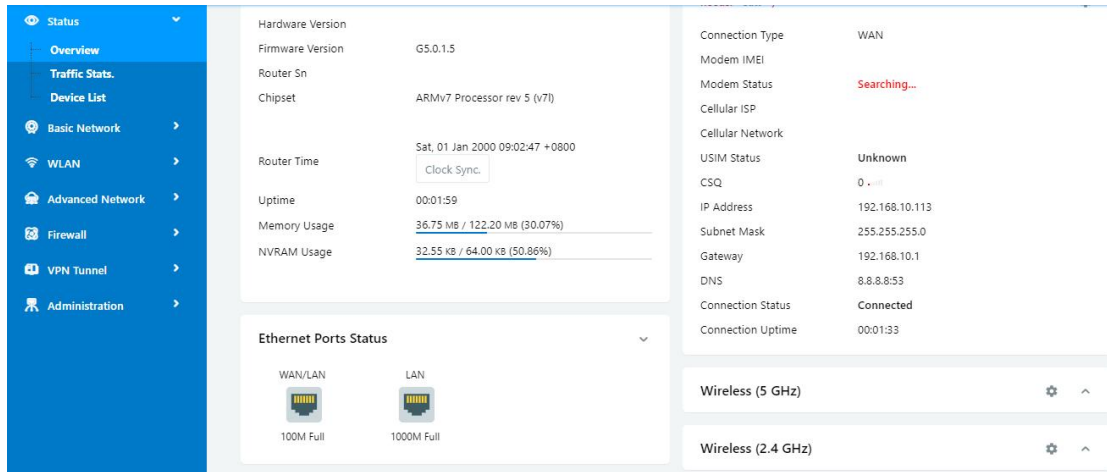

- 4) Navigate to **Basic Network > Schedule**, configure WAN (Link1) preferred, Cellular backup (Link2)
Add ICMP Check to WAN
Set the working mode (Schedule)

Parameters	Instruction
modem	The router dial-up to network via modem
wan	The router dial-up to network via WAN (DHCP, PPPOE, Static IP) Ethernet
ICMP Check	When the ICMP Check fails, the switching action between Link1 and Link2 will be triggered
Link1	The preferred link
Link2	The alternate link
BACKUP	Backup mode, Link1 and Link2 will remain online at the same time
FAILOVER	Failover mode, Link2 will dial-up to network when link1 fails

- 5) Status: WAN working

6) The system quickly switches traffic to Cellular when the WAN fails
 ---End

3.3 Port Forwarding

1) The router online and got a public IP address 14.31.134.94

Note: It's based on SIM card carrier

2) The PC is connected to router and got IP address 192.168.1.24

3) Configuration

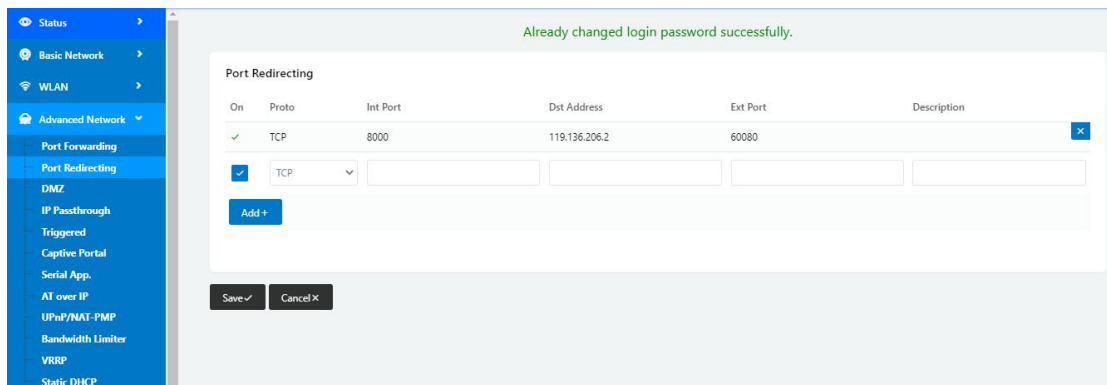

4) The PC can be accessed via 14.31.134.94:443 over Internet

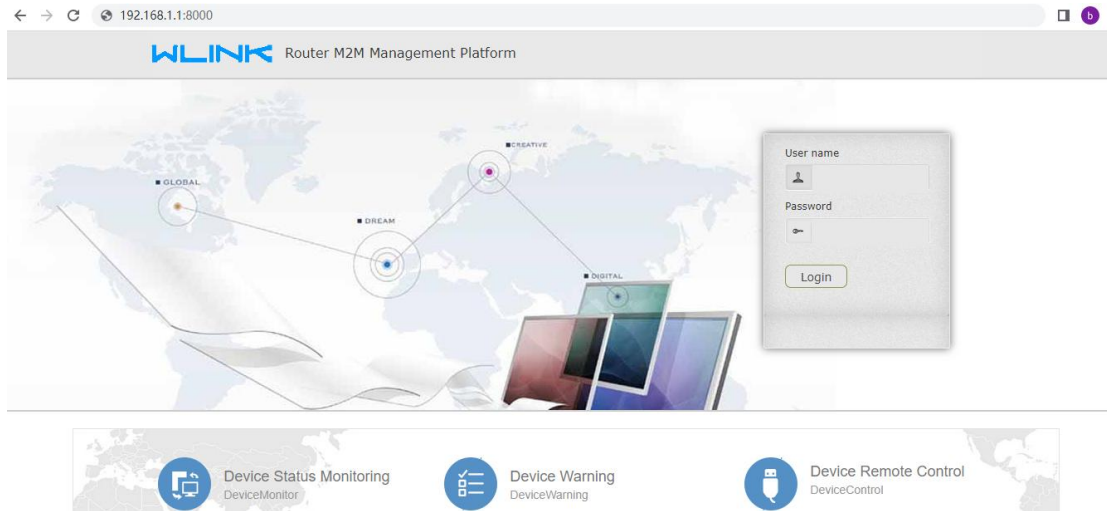

---End

3.4 Port Redirecting

Please click “Advanced Network> Port Redirecting” to check or modify the relevant parameter.

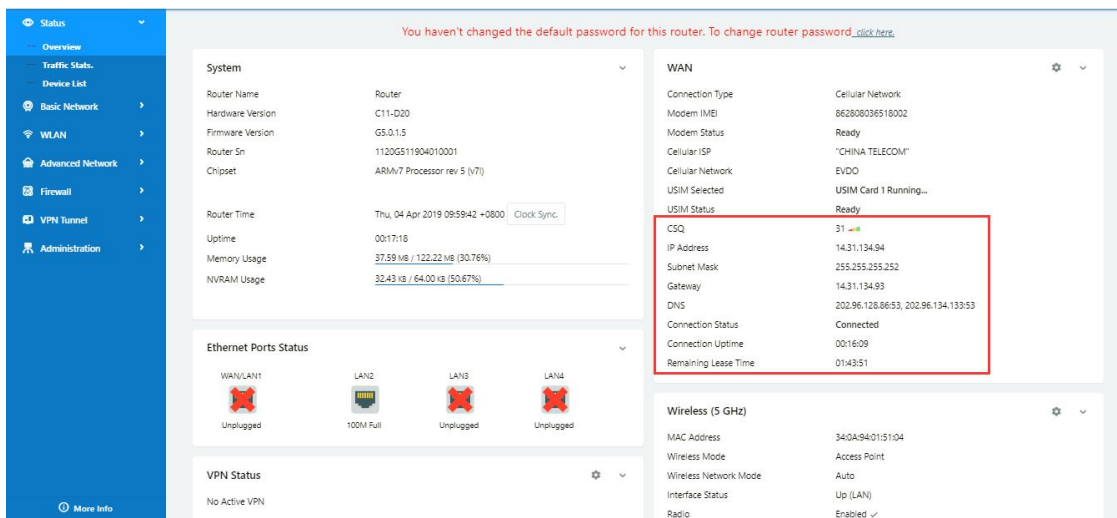

Configure Internal port as 8000, the Destination IP address as 119.136.206.2 and External port 60080(M2M Platform Server IP and Port as example). Access to 192.168.1.1:8000 in browser, the router will redirect to 119.136.206.2: 60080.

---End

3.5 IP Passthrough

1) The router online

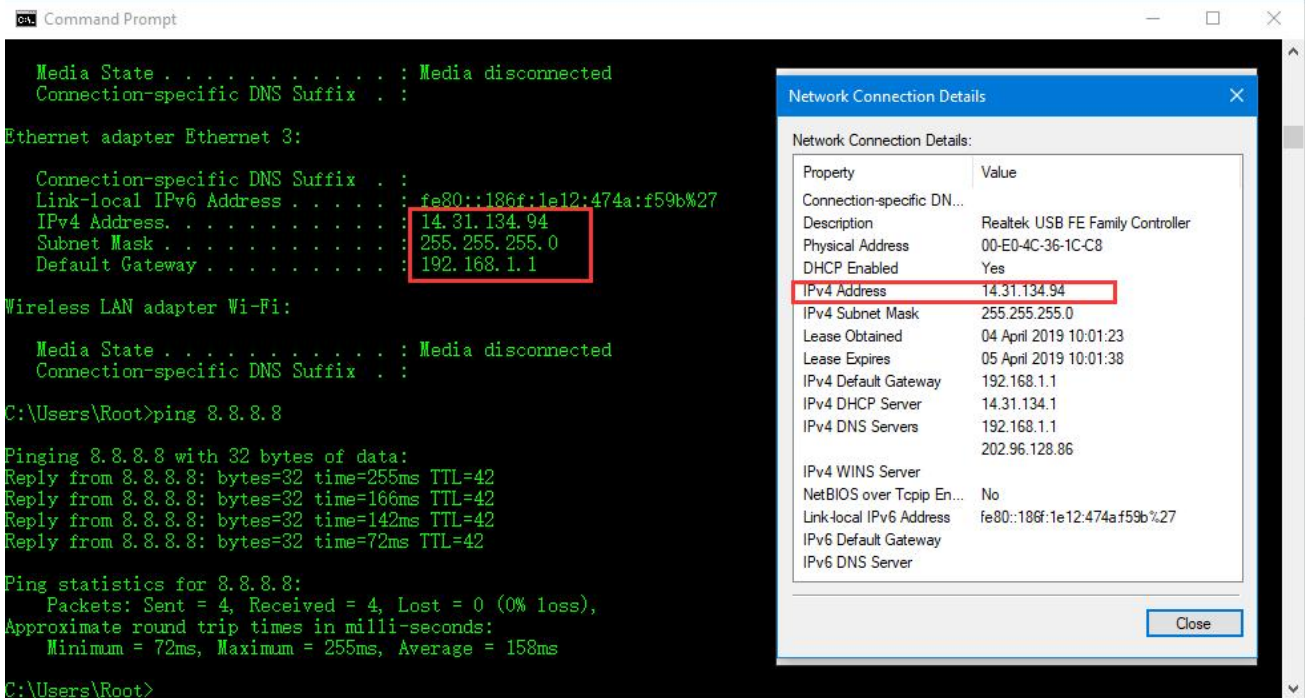

2) Configure IP passthrough destination MAC address (PC Ethernet MAC)

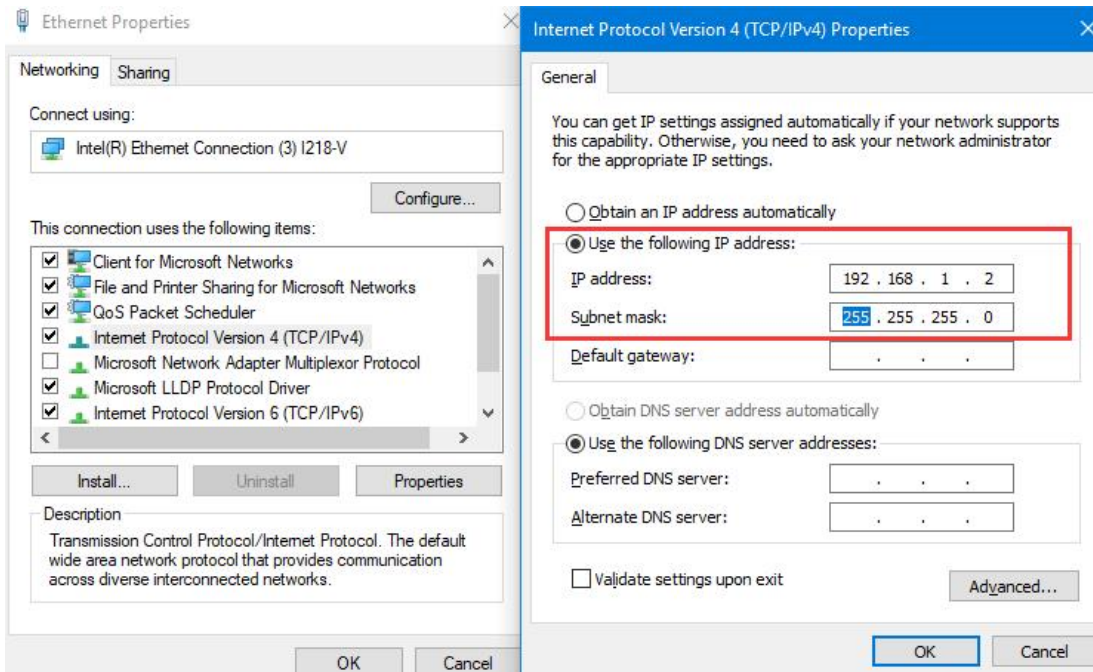

3) Set the PC to DHCP

4) Check the Ethernet status and ping test

5) Set the PC Ethernet as DHCP to release the IP and access to router GUI again

---End

3.6 Captive Portal

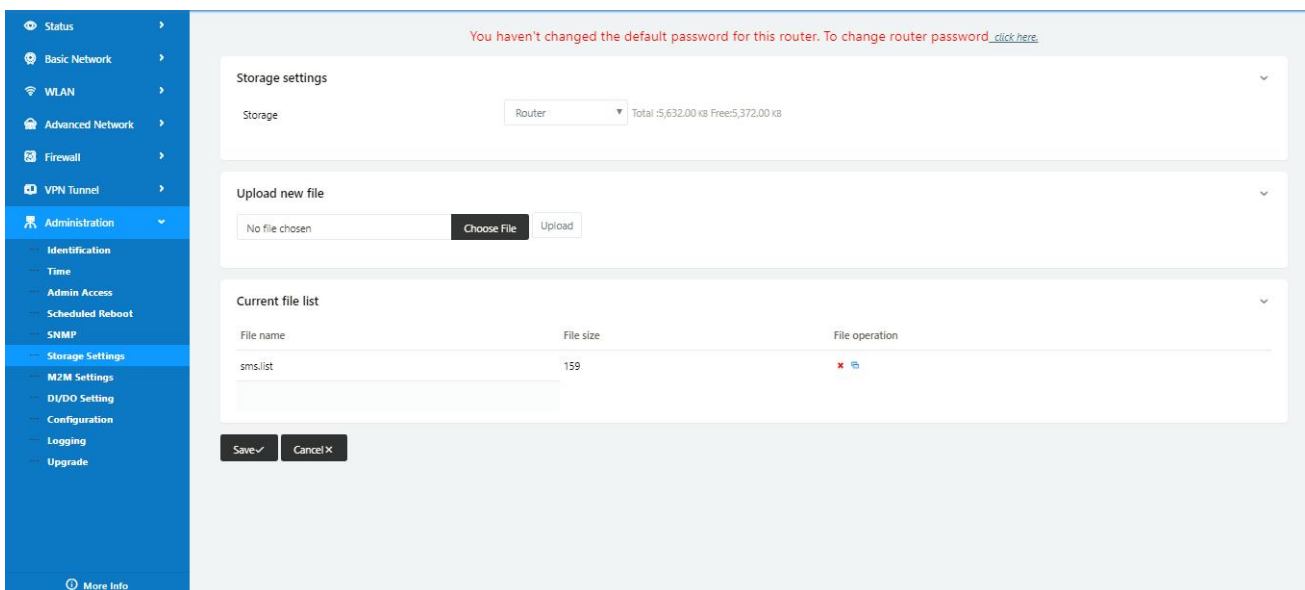

Please click “Advanced Network> Captive Portal” to check or modify the relevant parameter.

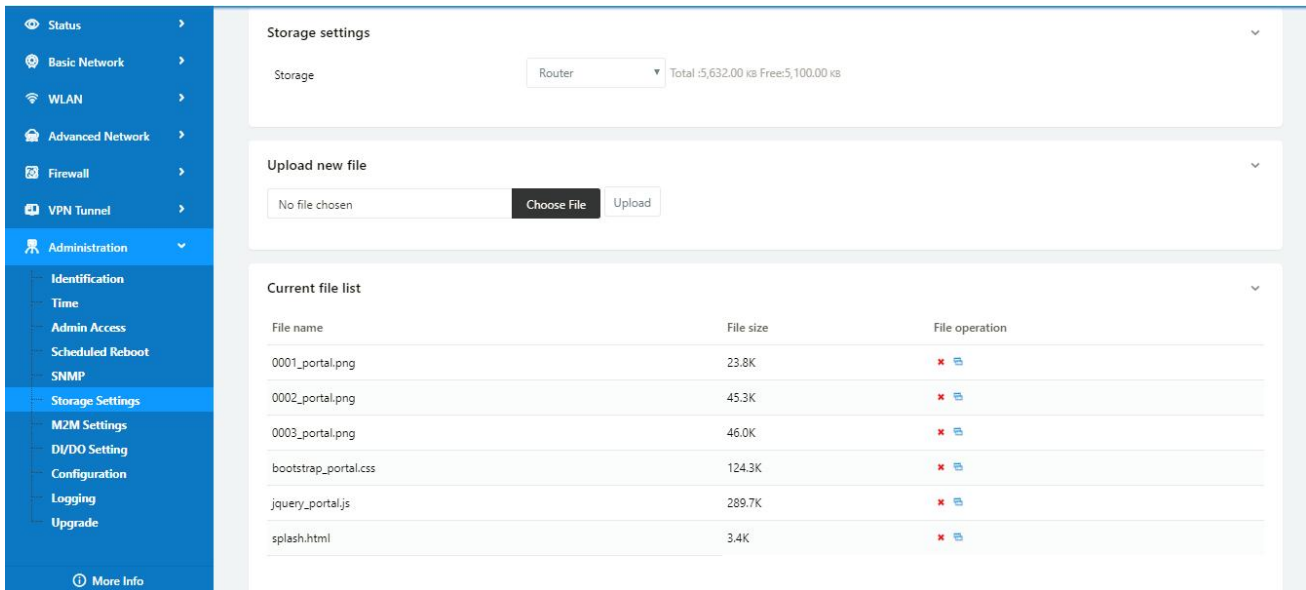

1) Upload Portal file and Splash.html by local

Upload portal images and splash.html in router for the Slider (0001_portal.png, 0002_portal.png, and 0003_portal.png) to the Router under the “Administration / Storage Settings” menu.

Furthermore, also might upload splash with images together.

Each Ad file just supports 3 Ad portal images. Picture format is acceptable for png/jpg and image size is less than 100Kbytes and resolution is 800*600. Picture name is 0001_portal.png, 0002_portal.png and 0003_portal.png. Furthermore, please keep image names the same between portal file and splash.html.

```

<!-- <hr> -->

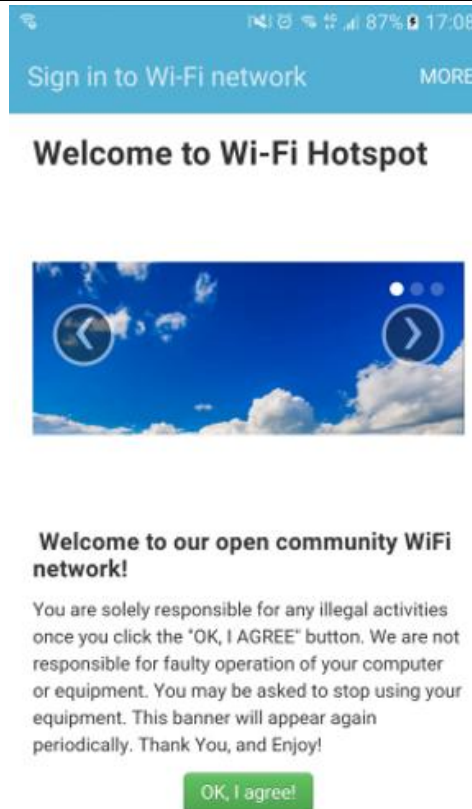

<div id="myCarousel" class="carousel slide marketing">
  <ol class="carousel-indicators">
    <li data-target="#myCarousel" data-slide-to="0" class="active"></li>
    <li data-target="#myCarousel" data-slide-to="1"></li>
    <li data-target="#myCarousel" data-slide-to="2"></li>
  </ol>

  <div class="carousel-inner">
    <div class="item active">
      
    </div>
    <div class="item">
      
    </div>
    <div class="item">
      
    </div>
  </div>
  <a class="left carousel-control" href="#myCarousel" data-slide="prev">&lsaquo;</a>
  <a class="right carousel-control" href="#myCarousel" data-slide="next">&rsaquo;</a>
</div>

<!-- <hr> -->

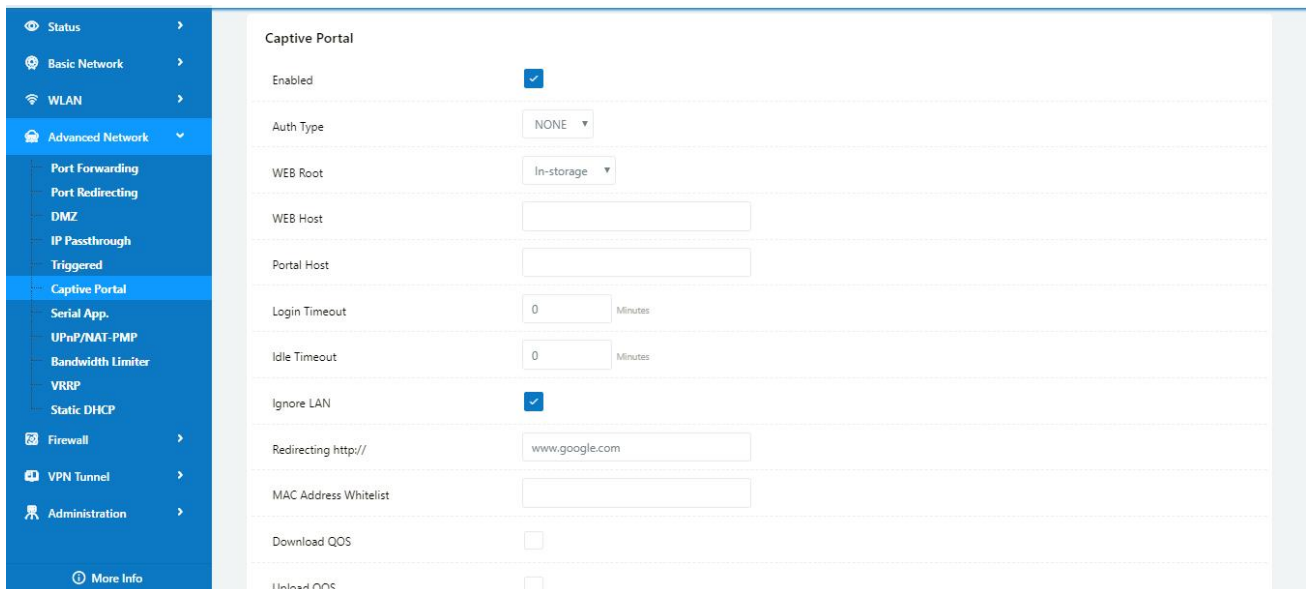

```

Finally, we can see the results by connect to router WIFI

2) Modify portal file storage path

Modify portal file storage for In-storage as below.

---End

3.7 GPS Settings

Please click “Advanced Network> GPS” to view or modify the relevant parameter.

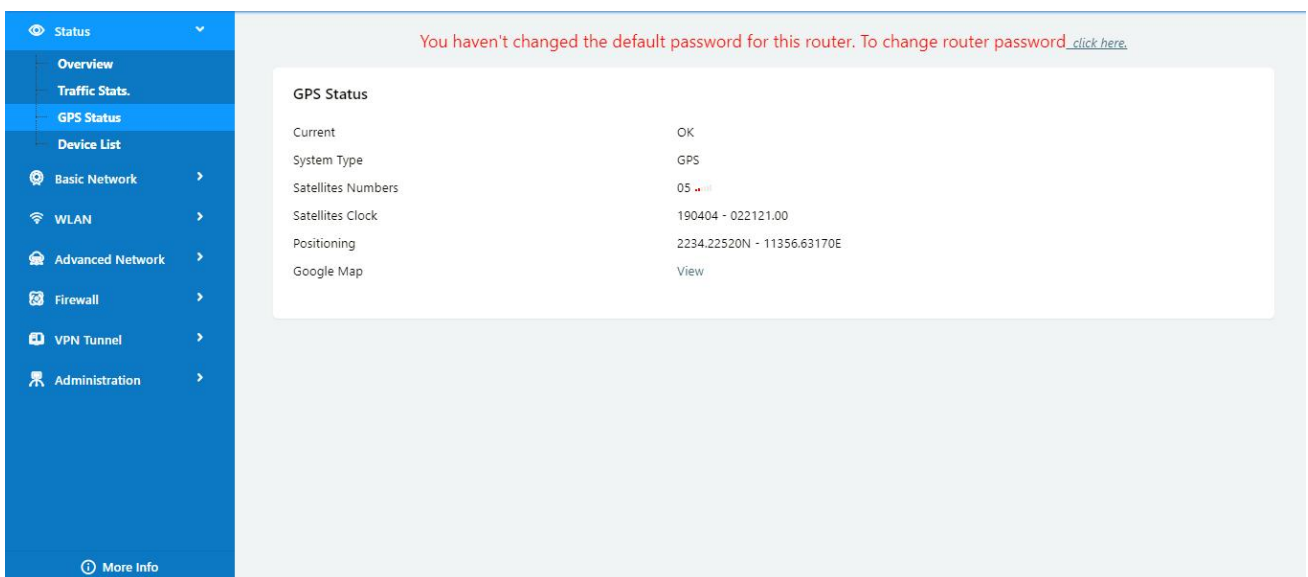

Table 4-6 “GPS” Instruction

Parameter	Instruction
GPS Mode	Enable/Disable
GPS Format	NMEA and M2M_FMT(WLINK)
Server IP/Port	GPS server IP and port
Heart-Beat	If choose M2M_FMT format, heart-beat ID will be packed into GPS data.
Interval	GPS data transmit as the interval time.

Step 1 Please click “save” to finis

Step 2 Connect the GPS antenna to router GPS interface

Step 3 Check GPS Status

M2M_FMT Format as below.

1. GPS data structure.

Router ID, gps_date, gps_time, gps_use, gps_latitude, gps_NS, gps_longitude, gps_EW, gps_speed, gps_degrees, gps_FS, gps_HDOP, gps_MSL

2. Example

0001_R081850ac,150904,043215.0,06,2234.248130,N,11356.626179,E,0.0,91.5,1,1.2,97.5

3. GPS data description

Field No.	Name	Format	Example	Description
1	Router ID	String	0001_R081850ac	0001 customizable product ID. _R router indicator. 081850ac Last 8digits of routers MAC address.
2	gps_date	yymmdd	150904	Date in year,month,day
3	gps_time	hhmmss.ss s	043215.0	UTC Time, Time of position fix.
4	gps_use	numeric	06	Satellites Used, Range 0 to 12.
5	gps_latitude	ddmm.mm mm	2234.248130	Latitude, Degrees + minutes.
6	gps_NS	character	N	N/S Indicator,N=north or S=south.
7	gps_longitude	ddmm.mm mm	11356.626179	Longitude, Degrees + minutes.
8	gps_EW	character	E	E/W indicator, E=east or W=west.
9	gps_speed	numeric	0.0	Speed over ground, units is km/h.
10	gps_degrees	numeric	91.5	Course over ground, unit is degree.
11	gps_FS	digit	1	Position Fix Status Indicator,
12	gps_HDOP	numeric	1.2	HDOP, Horizontal Dilution of Precision
13	gps_MSL	numeric	97.5	MSL Altitude, units is meter.

---End

3.8 Firewall

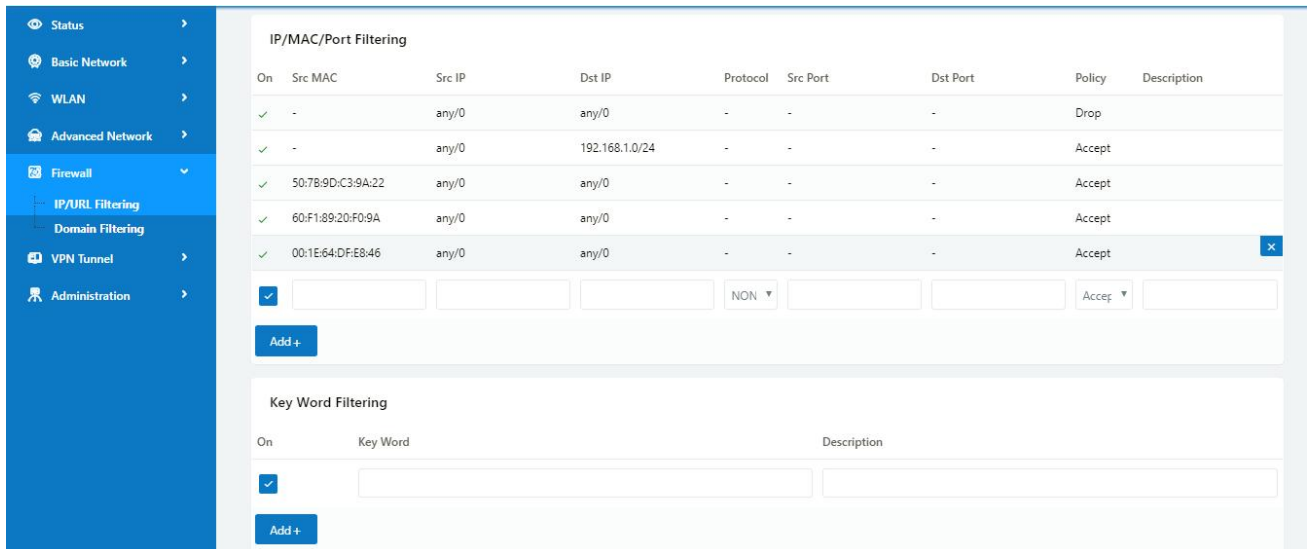

1) IP/MAC/Port Filtering

This part used to intercept packages from router's WAN/Celluar interface to Internet.

Test case:

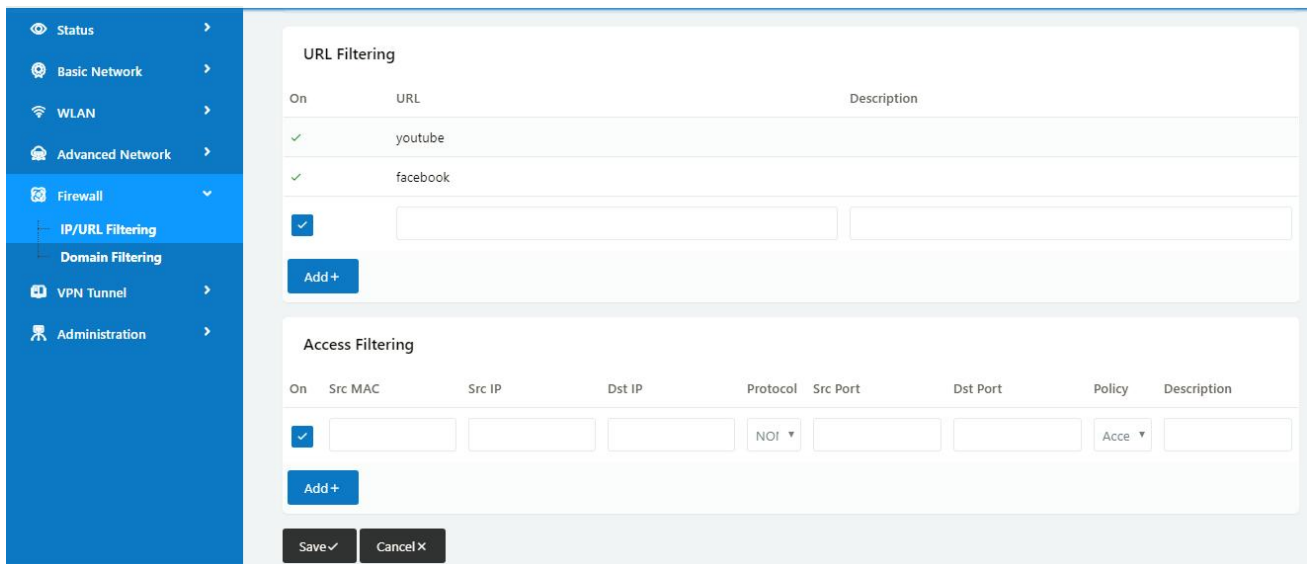

1.1 Only allow three devices (MAC/LAN/WLAN) can access to Internet via WAN: 110.110.10.10

1.2 Only allow three devices (MAC/LAN/WLAN) can access to the router page (192.168.1.1)

2) Key Word Filtering

This part used to filter key word packages from router's WAN/Celluar interface to Internet.

3) URL Filtering

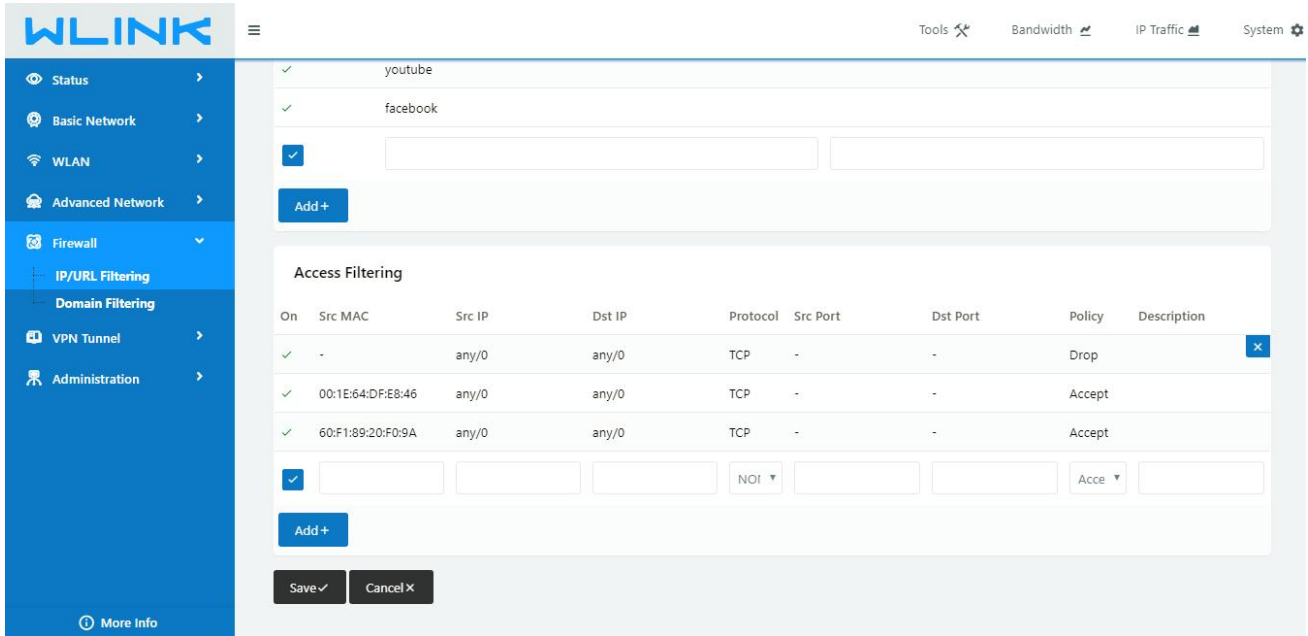

This part used to filter URL from router's WAN/Celluar interface to Internet.

4) Access Filtering

This part used to filter packages from Internet to router's WAN/Celluar interface.

Test case:

- 4.1) Intercept all TCP packets accessing the router's WAN/Celluar(110.110.10.10).
- 4.2) Only two devices (MAC/LAN/WLAN) are allowed to be accessed from Internet packets.

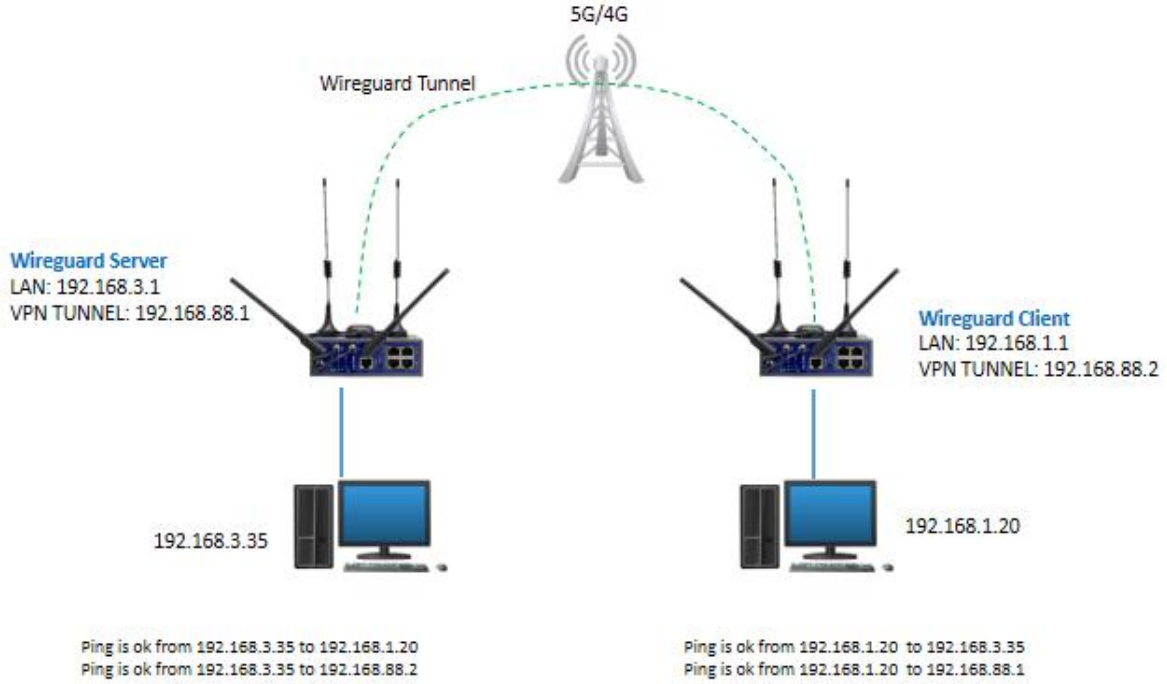

---End

3.9 VPN Tunnel

3.9.1 Wireguard VPN

Wireguard VPN between two WLINK Routers

1) Wireguard VPN Client Setting

Configure Wireguard Client as Server requested. Especially, the public Key and private key is generated by server or third party. Configure server public key in the peer key table and client private key in the local key table.

Wireguard	
Enabled	<input checked="" type="checkbox"/>
Mode	Client
Peer IP/Port	113.87.81.122 : 51821
Local Key	qFfPQ7MQL6G7mohLP3NYtvS5Zer05tDDdAFaFieJgUE=
Local IP/Mask	192.168.88.4/24 ex. 192.168.88.5/24
Peer Key	9VDgAnfn5xsNaKJ+Z6VKNCi5GSCpA+dkoscbXGKmkw=
Preshared Key	
Peer Subnet IP/Mask	192.168.3.0/24 ex. 192.168.88.0/24
<input type="button" value="Save"/> <input type="button" value="Cancel"/>	

2) Wireguard Routing

There are two routings when Wireguard established.

Destination	Gateway / Next Hop	Subnet Mask	Metric	Interface
default	192.168.10.1	0.0.0.0	0	wan
127.0.0.0	*	255.0.0.0	0	lo
192.168.1.0	*	255.255.255.0	0	lan
192.168.3.0	*	255.255.255.0	0	wg0
192.168.10.0	*	255.255.255.0	0	wan
192.168.10.1	*	255.255.255.255	0	wan
192.168.88.0	*	255.255.255.0	0	wg0

3) Wireguard Connection Check

Check VPN connection via Ping testing.

```

Wireguard Peer Virtual IP

WG Server Gateway IP

WG Server LAN Host IP

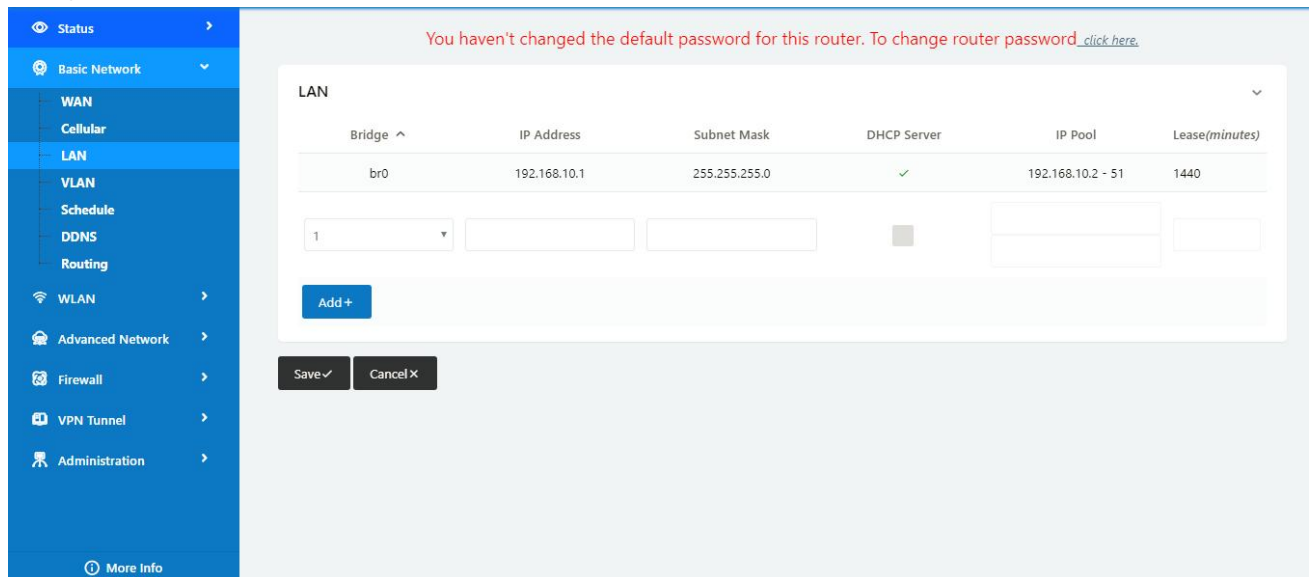

3.9.2 GRE

GRE Tunnel between WLINK Routers

1) WL-G930(A) Config

Navigate to **Basic Network > LAN**

Navigate to **VPN Tunnel > GRE**

The screenshot shows the 'VPN Tunnel' configuration page. The left sidebar is expanded to 'VPN Tunnel' > 'GRE'. The main content area has two sections:

- GRE Tunnel:** A table with columns: On, Idx, Tunnel Address, Tunnel Source, Tunnel Destination, Keepalive, Interval, Retries, Description. One entry is visible: Idx 1, Tunnel Address 192.168.10.10, Tunnel Source 113.113.11.11, Tunnel Destination 113.111.10.10, Keepalive checked, Interval 10, Retries 5, Description A. Below the table is an 'Add+' button.
- GRE Route:** A table with columns: On, Tunnel Index, Destination Address, Description. One entry is visible: Tunnel Index 1, Destination Address 192.172.1.0/24, Description A. Below the table is an 'Add+' button.

At the bottom of the configuration area are 'Save ✓' and 'Cancel X' buttons.

2) WL-G930(B) Config

Navigate to **Basic Network > LAN**

The screenshot shows the 'LAN' configuration page. At the top, a red warning message reads: "You haven't changed the default password for this router. To change router password [click here](#)." The left sidebar is expanded to 'Basic Network' > 'LAN'. The main content area has a table with columns: Bridge, IP Address, Subnet Mask, DHCP Server, IP Pool, Lease(minutes). One entry is visible: Bridge br0, IP Address 192.172.1.1, Subnet Mask 255.255.255.0, DHCP Server checked, IP Pool 192.172.1.2 - 51, Lease 1440. Below the table is an 'Add+' button. At the bottom are 'Save ✓' and 'Cancel X' buttons.

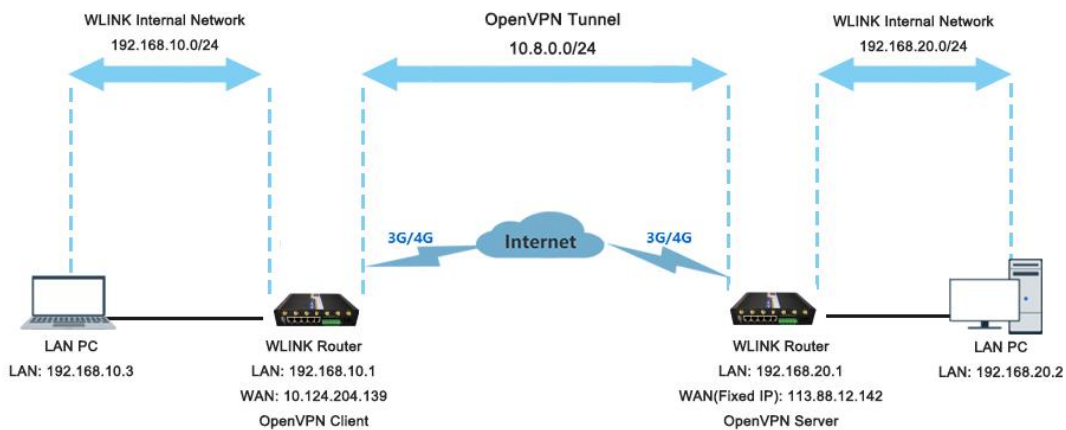

Navigate to **VPN Tunnel > GRE**

The screenshot shows the router's configuration page for VPN Tunnels. On the left is a navigation menu with options: Status, Basic Network, WLAN, Advanced Network, Firewall, VPN Tunnel (selected), GRE, OpenVPN Client, PPTP/L2TP Client, IPSec, and Administration. The main content area is divided into two sections:

- GRE Tunnel:** A table with columns: On, Idx, Tunnel Address, Tunnel Source, Tunnel Destination, Keepalive, Interval, Retries, and Description. One entry is shown with Idx 1, Tunnel Address 192.172.1.10, Tunnel Source 113.111.10.101, Tunnel Destination 113.113.11.11, Keepalive checked, Interval 10, Retries 5, and Description B. Below the table is an 'Add +' button.
- GRE Route:** A table with columns: On, Tunnel Index, Destination Address, and Description. One entry is shown with Tunnel Index 1, Destination Address 192.168.10.0/24, and Description B. Below the table is an 'Add +' button.

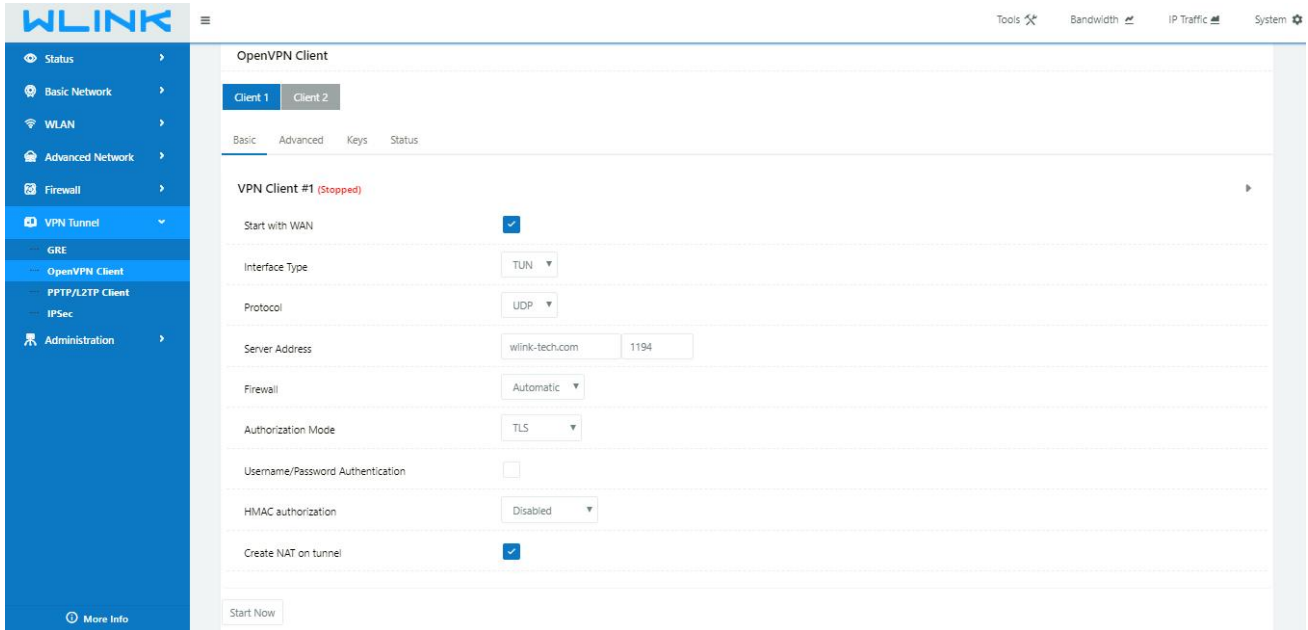

At the bottom of the configuration area are 'Save ✓' and 'Cancel X' buttons.

3.9.3 OpenVPN

OpenVPN between WL-G930 client and Server

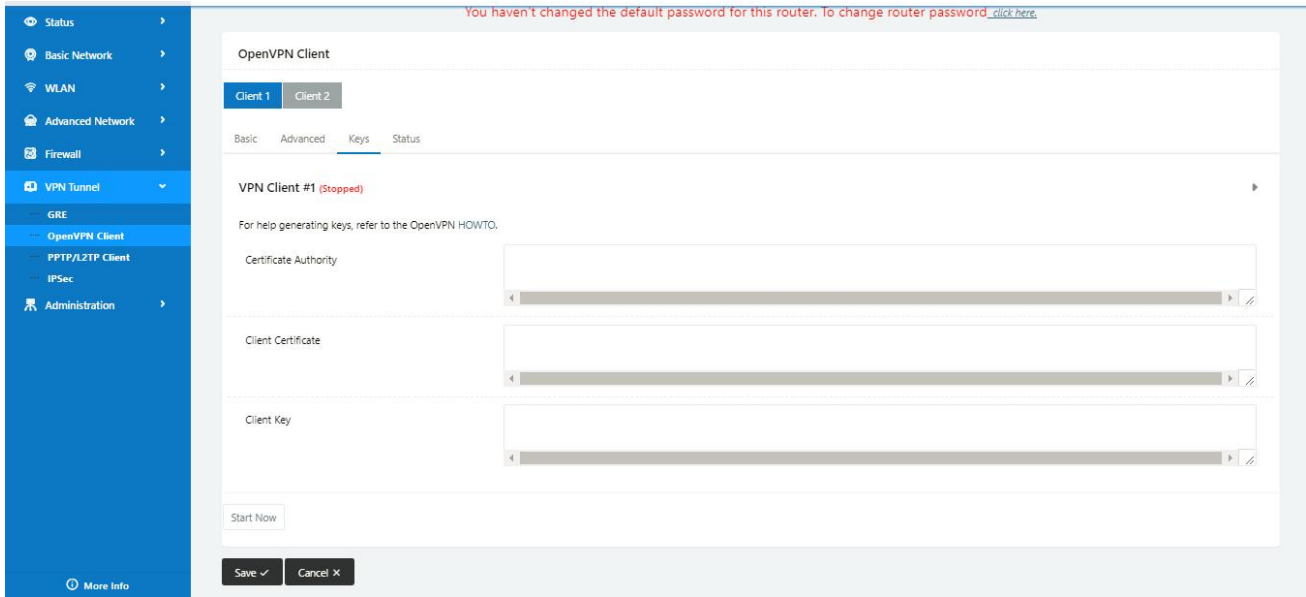

Please click "VPN Tunnel> OpenVPN Client" to check or modify the relevant parameter.

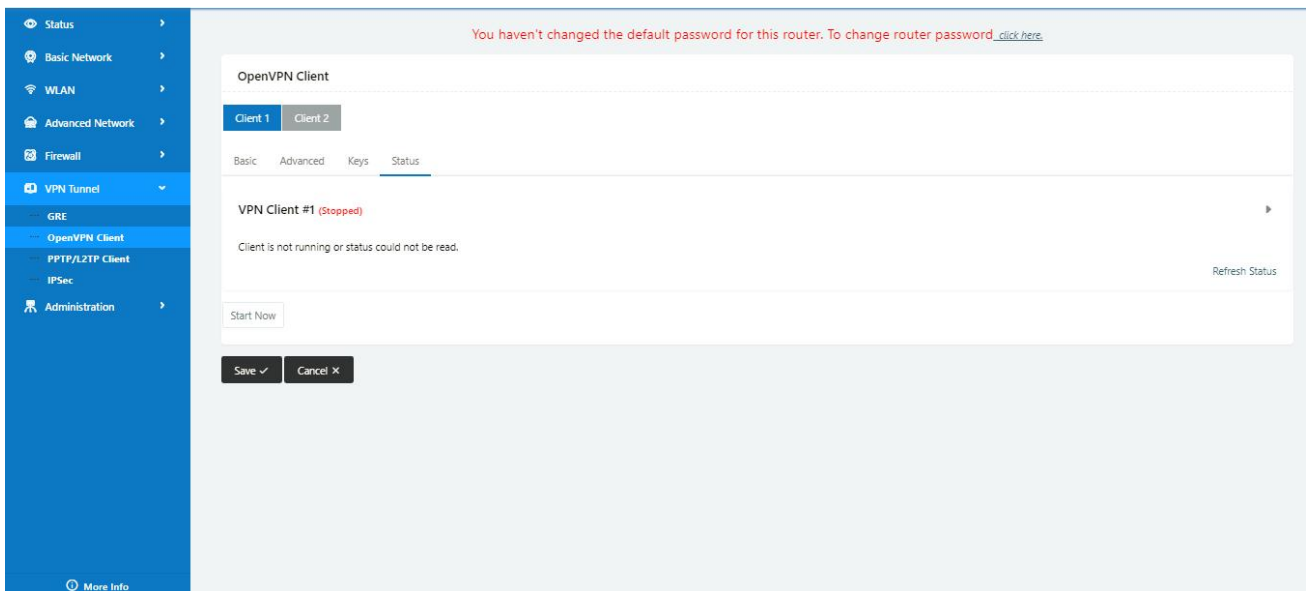

Parameter	Instruction
Start with WAN	Enable the Openvpn feature for 4G/3G/WAN port.
Interface Type	Tap and Tun type are optional. Tap is for bridge mode and Tunnel is for routing mode.
Protocol	UDP and TCP optional.
Server Address	The Openvpn server public IP address and port.
Firewall	Auto, External only and Custom are optional
Authorization Mode	TLS, Static key and Custom are optional.
User name/Password Authentication	As the configuration requested.
HMAC authorization	As the configuration requested.
Create NAT on tunnel	Configure NAT in Openvpn tunnel.

Parameter	Instruction
Poll Interval	Openvpn client check router's status as interval time.
Redirect Internet Traffic	Configure Openvpn as default routing.
Access DNS	As the configuration requested.
Encryption	As the configuration requested.
Compression	As the configuration requested.
TLS Renegotiation Time	TLS negotiation time. -1 as default for 60s.
Connection Retry Time	Openvpn retry to connection interval.
Verify server certificate	As the configuration requested.
Custom Configuration	As the configuration requested.

Parameter	Instruction
Certificate Authority	Keep certificate same as the server
Client Certificate	Keep client certificate same as the server
Client Key	Keep client key same as the server

Parameter	Instruction
Status	Check OpenVPN status and data statistics.

Click “save” and “start now” to enable OpenVPN when you have done all the client config.

OpenVPN Keys Guide

The following steps are for server running on Windows 7/8/10

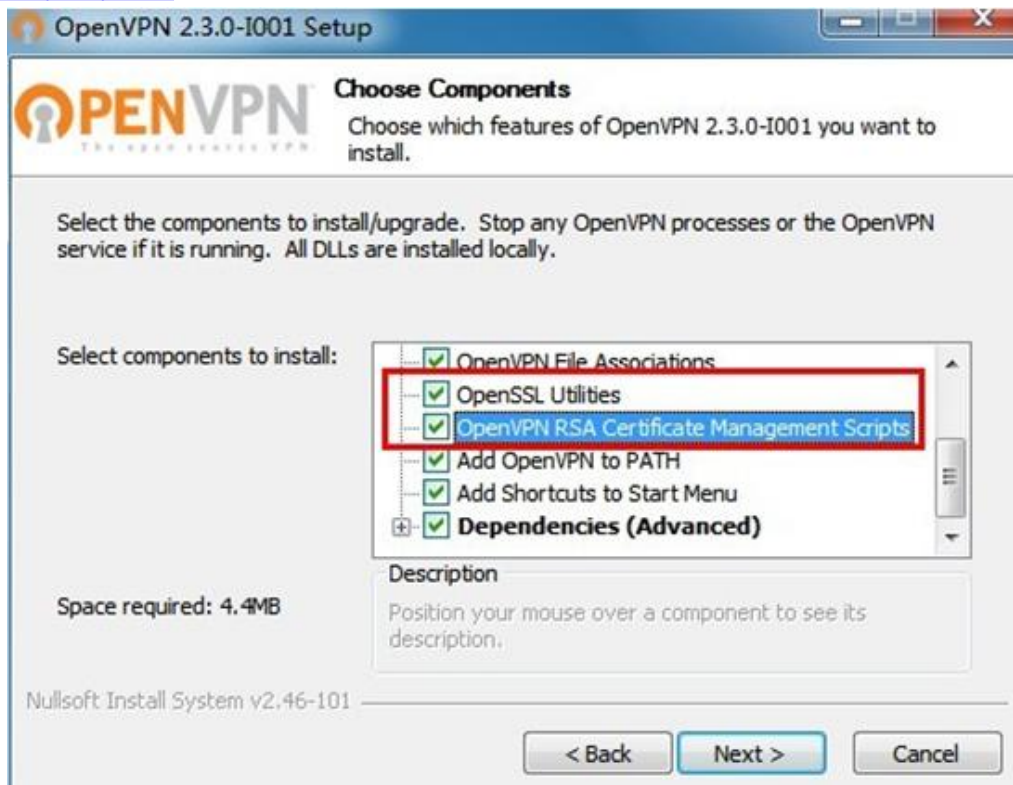

Access to (<http://openvpn.net/release/>) and download the file “openvpn-2.3.0-install.exe” (or higher)

Index of /release

Name	Last modified	Size	Description
Parent Directory		-	
lzo-1.08-3.0.el2.dag.i386.rpm	21-Feb-2012 00:50	55K	
lzo-1.08-3.0.rh7.dag.i386.rpm	21-Feb-2012 00:50	54K	
lzo-1.08-3.0.rh8.dag.i386.rpm	21-Feb-2012 00:50	58K	
lzo-1.08-4.0.rh9.rf.i386.rpm	21-Feb-2012 00:50	59K	
lzo-1.08-4.1.el3.rf.i386.rpm	21-Feb-2012 00:50	58K	
lzo-1.08-4.1.el3.rf.x86_64.rpm	21-Feb-2012 00:50	55K	
lzo-1.08-4.1.fc1.rf.i386.rpm	21-Feb-2012 00:50	58K	

After installing OpenVPN, please find the OpenVPN folder to generate the certificate of server and client. (Access to <http://openvpn.net> for more information)

3.9.4 L2TP/PPTP

Please click "VPN Tunnel>PPTP/L2TP Client" to view or modify the relevant parameter.

Configured as PPTP

Note: The Custom Options are based on your server
 ---End

3.9.5 IPSec

IPSec between WL-G930 and Cisco Router

1) Cisco Config (main mode)

!
 crypto isakmp policy 10

```

encr 3des
hash md5
authentication pre-share
group 2
crypto isakmp key test1234 address 0.0.0.0 0.0.0.0
!
!
crypto ipsec transform-set Tran-set esp-3des esp-sha-hmac
crypto ipsec nat-transparency spi-matching
!
    
```

2) WLINK Config

Navigate to **VPN Tunnel > IPSec > Group Setup**

The screenshot shows the 'Group Setup' configuration page for IPSec. The interface includes a navigation menu on the left with options like Status, Basic Network, WLAN, Advanced Network, Firewall, VPN Tunnel, GRE, OpenVPN Client, PPTP/L2TP Client, IPSec, and Administration. The main configuration area has tabs for 'IPSec 1', 'IPSec 2', and 'Schedule'. Under the 'Group Setup' tab, there are sections for 'Basic Setup' and 'Advanced Setup'. The 'Basic Setup' section includes:

- Enable IPSec:
- IPSec Extensions: Normal
- Local Security Gateway Interface: 3G Cellular
- Local Security Group Subnet/Netmask: 192.168.1.0/24 (example: 192.168.1.0/24)
- Local Security Firewalling:
- Remote Security Gateway IP/Domain: 113.88.13.142
- Remote Security Group Subnet/Netmask: 10.10.0.0/24 (example: 192.168.88.0/24)
- Remote Security Firewalling:

 At the bottom, there are 'Save' and 'Cancel' buttons. A warning message at the top right states: 'You haven't changed the default password for this router. To change router password [click here](#).'

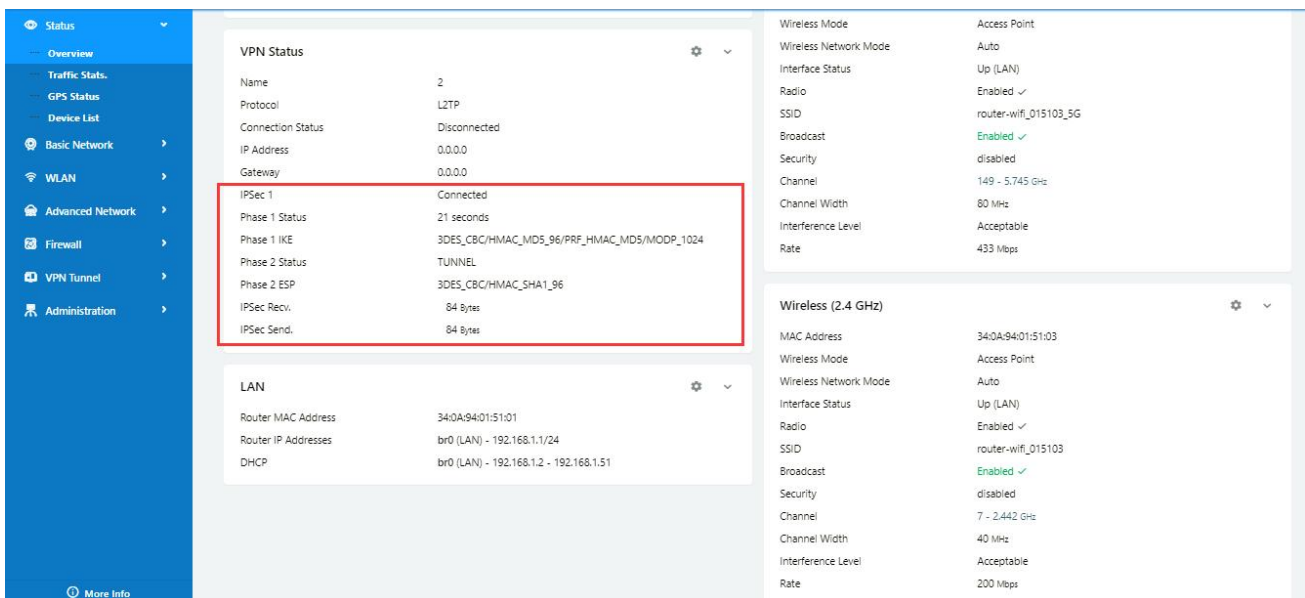

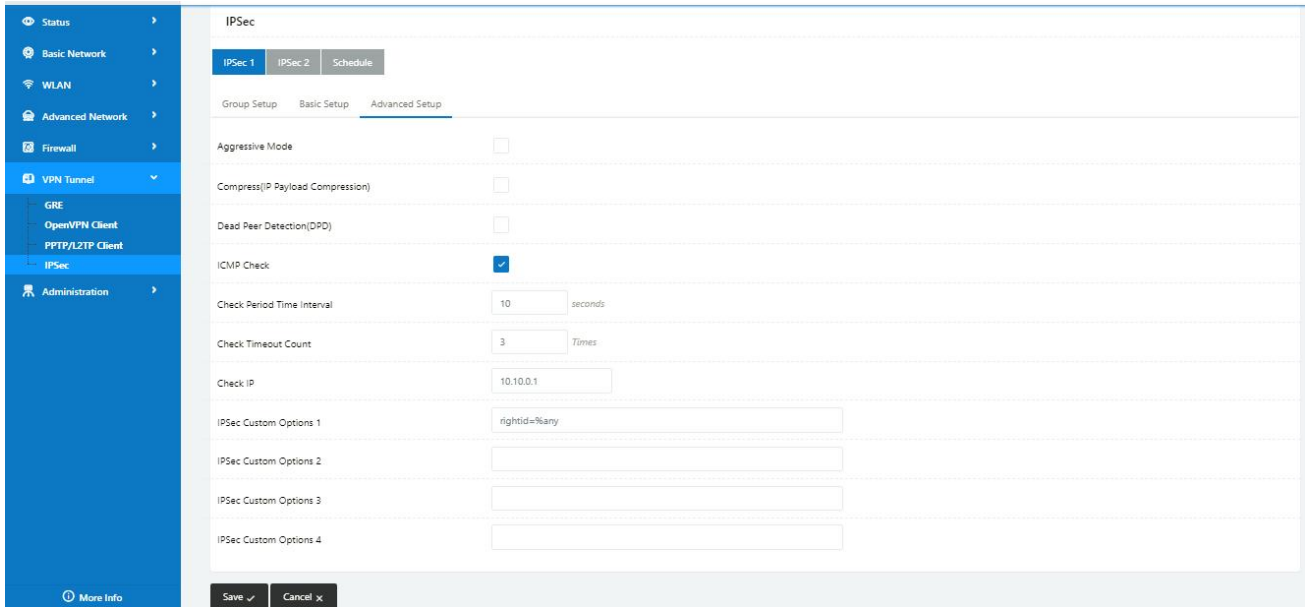

Navigate to **VPN Tunnel > IPSec > Basic Setup**

The screenshot shows the 'Basic Setup' configuration page for IPSec. The interface includes a navigation menu on the left with options like Status, Basic Network, WLAN, Advanced Network, Firewall, VPN Tunnel, GRE, OpenVPN Client, PPTP/L2TP Client, IPSec, and Administration. The main configuration area has tabs for 'IPSec 1', 'IPSec 2', and 'Schedule'. Under the 'Basic Setup' tab, there are sections for 'Group Setup', 'Basic Setup', and 'Advanced Setup'. The 'Basic Setup' section includes:

- Keying Mode: IKE with Preshared Key
- Phase 1 DH Group: Group 2 - modp1024
- Phase 1 Encryption: 3DES (168-bit)
- Phase 1 Authentication: MD5 HMAC (96-bit)
- Phase 1 SA Life Time: 28800 seconds
- Phase 2 DH Group: Group 2 - modp1024
- Phase 2 Encryption: 3DES (168-bit)
- Phase 2 Authentication: SHA1 HMAC (96-bit)
- Phase 2 SA Life Time: 3600 seconds
- Preshared Key: *****

 At the bottom, there are 'Save' and 'Cancel' buttons.

Navigate to **VPN Tunnel > IPSec > Advanced Setup**

---End

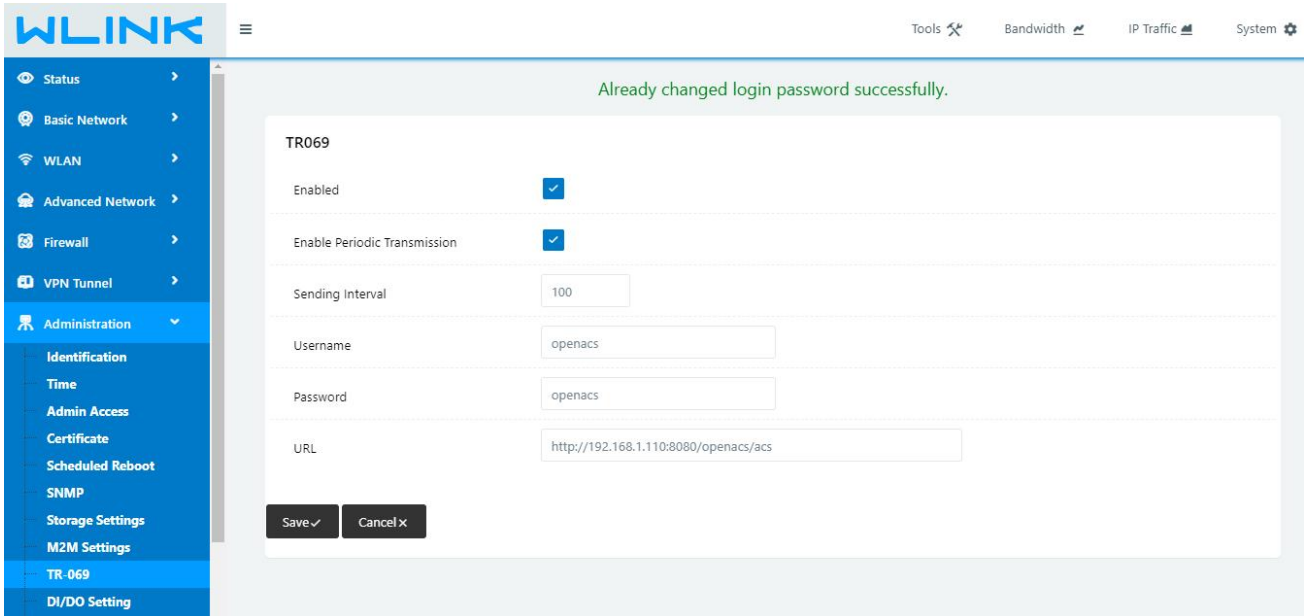

3.10 TR-069

ACS and WL-G535 communicate through the RPC methods of TR069 protocol.

The following features are currently supported in the standard firmware for the WLINK family routers

(Note: We also support customizing the TR069 and TR098 data-model into the firmware to support more features)

- SetParameterValues
- GetParameterValues
- Reboot
- Download
- Upload
- FactoryRese

---End
